Installation Notes

Installation

Removing a terminal block from the assembly.

Grounding foot

Ground conductor terminal blocks (limited to max. 120 mm²/250 kcmil per EN 60947-7-2) must be snapped onto a 2.3 mm thick copper carrier rail.

Conductor termination

Conductor termination – step 1

Rotate the operating tool (5.5 mm blade width) counter-clockwise. Next, push in the orange locking tab. The clamp is locked open for hands-free wiring.

Conductor termination – step 2

Insert a stripped conductor into the clamping unit until it hits backstop. Hold in this position.

Conductor termination – step 3

A small counter-clockwise rotation closes the clamp, securing conductor. When unlocked, allow operating tool to rotate clockwise to securely terminate the conductor.

Subject to changes. Please also observe the further product documentation!

Side-entry wiring means that even larger conductors, which have limited flexibility, can be easily connected.

Commoning

Commoning adjacent terminal blocks using a centrally positioned push-in jumper.

Slide the marking strip laterally to remove the jumper.

Voltage Tap

The power tap is inserted into the jumper contact slot. It can be fitted with a strain relief plate.

The power tap is inserted into the jumper contact slot.

Always push power tap (283-407) down into the terminal block until fully inserted!

Subject to changes. Please also observe the further product documentation!

Testing

Testing with test plug adapter (283-404)

Testing

Marking

WMB markers or self-adhesive, printable marking strips can be accommodated on 35, 50 and 95 mm² high-current terminal blocks.

Marker carrier for marking strips (2009-110) or 2 x WMB markers for 285-13x, 285-15x and 285-19x terminal blocks
