

HOME THEATER AUDIO WALL PLATES

AUDIO WALL PLATES

A new expanded line of wall plates makes installation simpler than ever, and tidies up the increasing number of cables that advanced systems require. The **30-382** single speaker plate is ideal for the termination point of single speaker systems, and accepts bare wire or banana plugs. The **30-1515** is mounted on dual "J" boxes, supports two subwoofers, and has extra large spring-clips in front, and terminal strips in back.
