Good bits

These are very good bits, but I incorrectly thought these are on the same level as the Wiha precision screwdrivers. They are not. These bits are a couple steps above the typical American made or Chinese made bits but they still do not have the precision ground tip found on the Wiha precision screw drivers such as these: <https://www.wihatools.com/tech-tools/precision-screwdrivers/precision-slotted-phillips-screwdrivers-7-piece-set> What differentiates the precision screw drivers is those bits have a finely and sharply ground tip. For example on the 00 phillips bit, the tip of the precision ground driver is a very SHARP and well defined cross. This ensures that the tip will bite into the screw head without slipping when torque is applied. I will buy Wiha's precision screw driver set.
