SOLDERING IRON

The HAKKO Presto irons are light-duty soldering irons with a difference — there is a (yellow) switch allowing the user to kick up the power for occasional heavy-duty applications.

The iron delivers 20W power normally, but when quick heat-up is needed, or when a large amount of energy is temporarily required (such as soldering relays or connectors) **the yellow switch allows for 130W of power.**

Two styles available: pencil and pistol.

Part Number: 980-V12 (pencil-style)

Part Number: 981-V12 (pistol-style)

(see Specifications for details)
