Switches and Pilot Devices

Selection Guide

TW Series Oiltight Switches and Pilot Devices Ø 7/8" (22mm)

Series Model	AΔW...	AΔLW...	ASW...	ASLW...	APW...
Appearance	Flush 	Extended 			Dome Lens
	Extended 	Extended/Shroud 			Flush Lens
	Mushroom 	Mushroom 	Knob Operator 	Knob Operator (w/transformer) 	
	Square Flush 	Square Extended 	Lever Operator 		Square Flush
	Square Extended 	Push-Pull 	Key Operator 		Square Flush (w/transformer)
	Pushlock Turn Reset 	Pushlock Turn Reset 			
See Page	A-124	A-132	A-136	A-141	A-129
Operator Types	Non-illuminated Pushbuttons: • Momentary • Maintained • E-Stop	Illuminated Pushbuttons: • Momentary • Maintained • E-Stop • LED/Incandescent	Selector Switches: • 2, 3, 4, 5-position • Maintained • Spring Return • Colored knobs/ inserts	Illuminated Selectors: • Full Voltage/ Transformer • LED/Incandescent	Pilot Lights: • Full Voltage/ Transformer • LED/Incandescent
Contact Configuration	Modular: NO,NC, NO-EM, NC-LB (maximum 6 contacts)		See Contact Arrangement Charts page A-146.		—
Contact Ratings	10A thermal current				
Electrical Life	600V maximum				
Mechanical Life	Momentary Pushbuttons: 5,000,000 operations minimum; Others: 500,000 operations minimum Selector Switches: 500,000 operations minimum				
Degree of Protection	NEMA Type 1, 2, 3, 3R, 4, 4X, 5, 12, 13; Waterproof/Oiltight/Corrosion Resistant: IP65				
Termination	M3.5 Screw Terminals with captive sems plate				
Approvals	UL Listed File No. E70646	CSA Certified File No. LR48366	TÜV Rheinland File No. 9561116E01		

1. Illuminated units include lamp.

2. Available as assembled or sub-assembled components.

General Information**Information About LED Lamps**

Light-emitting diodes (LEDs) are P-N junction semiconductors with mechanisms called "junction electro-luminescence." Application of direct current results in radiation or emission of a monochromatic light.

Different semiconductor materials produce different wavelengths of light as shown below:

A

Specifications	Green	Gallium Phosphide (GaP)	5600 Å
	Yellow	Gallium Arsenide Phosphide (GaAsP)	5800 Å
	Amber	Gallium Arsenide Phosphide (GaAsP)	6300 Å
	Red	Gallium Arsenide Phosphide (GaAsP)	6600 Å
	Infrared	Gallium Arsenide (GaAs)	9000 Å

Advantages of Using LEDs

- LEDs are used when heat generated by incandescent lamps would damage nearby equipment or interfere with a precision process. This is particularly advantageous when multiple lights are grouped.
- LEDs can operate at low temperatures which would cause incandescent lamps to fail, since glass cracks during rapid cooling.
- LEDs consume 50 times less power than incandescent lamps, thereby reducing energy consumption.
- LEDs last 500 times longer than incandescent lamps. LEDs average a million hours (114 years) while incandescent lamps average 2000 hours.
- LEDs do not generally "blow out" unless subjected to a severe overvoltage. They exhibit a half-life type diminishment in brightness over time. After 50,000 hours (6 years) of use, IDEC LEDs will retain approximately half of their original intensity.
- IDEC's **SUPERBRIGHT** LEDs have high visibility.
- LEDs require little or no maintenance because of long life and high reliability.

IDECA Recommendations

For optimum results, especially when using switches and pilot lights in operating environments which are conducive to overheating, use IDEC LED illuminated units. Transformers are available for use with incandescent illuminated units, which operate at lower voltages to avoid overheating.

When IDEC's L-120L lamp is used, make sure ambient temperatures do not exceed 30°C (86°F). If a lamp from another supplier is used, it should be rated for less than 1.8 watts (15mA at 120V AC), with ambient temperatures as stated above.

Information About Incandescent Lamps

Filament-type incandescent lamps operate within the following parameters.

Light output and life expectancy depend on operating voltage. Light output varies to the 3rd or 4th power of the voltage. Life expectancy varies inversely to the 12th power of voltage. In other words, over-voltage of 5% reduces life expectancy by 50%. Under-voltage of 5% doubles life expectancy at the price of light output efficiency.

Inrush current (initial current through the filament) has an adverse effect on life expectancy. Cold resistance (room temperature) will have a more detrimental effect than hot resistance to inrush current. Life expectancy of incandescent lamps can be maximized by reducing occurrences of cold resistance to inrush current.

Continued intermittent flashing will significantly reduce life expectancy. When using an incandescent lamp with a tungsten filament, flashing will not reduce life expectancy as long as light output does not exceed that of steady burning.

When an incandescent lamp must withstand shock and vibration, use low voltage/high amperage (5–6V/60–120mA) lamps. These lamps have a short, thick filament with a high resonant frequency.

Provide cooling by using a heat sink, particularly when multiple incandescent lamps are grouped or when air circulation is limited. Make sure ambient temperatures do not exceed 100°C (212°F) for maximum life of incandescent lamps.

Comparison: LED vs. Incandescent Lamps

Characteristics	<i>Superbright LEDs</i>	<i>Incandescent</i>
Heat Dissipation	Very Low	High
Life Expectancy	Very Long	Short
Reliability	Very High	Low
Mechanical Strength	Not Susceptible	Susceptible to Shock/Vibration
Maintenance Required	Negligible	Frequent
Operation at Low Temps.	Possible	Not Possible
Inrush Current	Negligible	Very Large
Voltage Effects on Life	Insignificant	Significant
Brightness	Slightly Less	Slightly More

Ordering Information

1. IDEC offers assembled and sub-assembled switches and pilot lights for your convenience. In some cases there is a cost difference, with sub-assembled units costing slightly less. Since assembled units are custom made to your order, a couple of days for assembly is added to delivery. To minimize delivery or inventory requirements, it is recommended that switches and pilot lights be ordered as sub-components.
2. When ordering pilot lights or illuminated pushbuttons, make sure to specify the color code in place of the asterisk in the part number, (LED or incandescent lamp included). Spare lamps can be ordered and are listed with sub-assembly components.
3. Accessories, such as locking ring wrench, lens removal tool, and lamp holder, are available to make installation and assembly easier. IDEC recommends using these accessories and is not responsible for damage as a result of using the wrong tool.
4. Marking plates are available for switches and pilot lights which feature a flat lens. Printed mylar (not included) can also be inserted under lens for labeling purposes.
5. Nameplates are available for TW, 7/8" (22mm), HW 7/8" (22mm), and TWTD series, Ø1–13/64" (30mm). For prompt delivery, order standard legends. Custom engraving is also offered for an additional charge.

Installation and Operation

1. Use the appropriate lamp holder to remove or install LED or incandescent lamps. Using pliers will damage the lamp.
2. When mounting switches and pilot lights into a panel, use locking ring wrench. Using pliers or tightening excessively will damage the locking ring.
3. A series, 21/64" (8mm), can be mounted on a panel 0.019" (0.5mm) to 0.236" (6mm) thick.
4. LW 7/8" (22mm), TW, 7/8" (22mm), and TWTD series, Ø1–13/64" (30mm), feature an adjustment ring for mounting on a panel 0.038" (1mm) to 0.236" (6mm) thick. Using a nameplate or an anti-rotation ring adds 0.031" (0.8mm) to the panel thickness.
5. When applicable, solder terminals within 20W/5sec or 260°/3sec without exerting external force to the terminals. Use a non-corrosive resin liquid flux.
6. The operating voltage for LED units represents a complete DC value. When using a pulsing voltage, such a full-wave rectification, keep peak currents within the forward current I_f . Peak currents exceeding I_f may shorten the life of the LED lamp.
7. To avoid a short circuit, never connect NO and NC contacts to different voltages or power sources.
8. Optimum performance of TW and TWTD illuminated pushbuttons, selector switches, and pilot lights is obtained with IDEC LED and incandescent lamps.
9. For maximum life of incandescent lamps (approximately 2000 hours), use within the rated operating voltage. If it is necessary to use a higher voltage, keeping ambient temperature below 30°C (86°F) will help prolong the life of an incandescent lamp.

If excessive voltage is applied (over 50V), the lamp may blow and the lens holder may pop out.

TW Series — 22mm NEMA Style Pushbuttons

A

TW NEMA Style Switches with snap-on contacts

Key features include:

- Corrosion resistant octagonal chrome plated locking bezel
- Snap-on 10A contact blocks
- Transformer or full voltage
- Incandescent or LED illumination
- Slow make, double break, self cleaning contacts
- Modular construction for maximum flexibility
- NEMA 4X and IP65 watertight/oiltight panel
- Available assembled or as sub-components
- Large M3.5 screw terminals with captive screws plate

IDECA has your 22mm switching needs covered.

Button styles include flush, extended, mushroom, or square and all bodies are crafted from fracture-resistant nylon.

All illuminated units feature two lense styles, one that maximizes light dispersion, the other accommodates direct lense engraving.

Self cleaning contact mechanisms allow for a wide current rating, 5mA to 10A, which reduces the need for various contact materials.

When looking for a 22mm switch that is durable, easy to use, and versatile, then IDEC's TW series is your solution.

1. In place of ②, specify the lens color code from table below.
2. Non-marking lenses have a ribbed lens to enhance light dispersion. Marking lenses include an engravable insert.
3. LED lenses are lighter in color than incandescent lenses in order to compensate for the inherent color of the LED.
4. Use incandescent lens when using blue LED.

② Lens/LED Color Code

Color	Code
Amber	A
Green	G
Red	R
Blue	S
White	W
Yellow	Y
Clear (white)	C (square & marking lenses only)

Part Numbers: Lamps

Type	Voltage	Current	Part Number
LED	6V AC/DC	20mA	LSTD-6-②
	12V AC/DC	20mA	LSTD-1-②
	24V AC/DC	20mA	LSTD-2-②
	120V AC	10mA	LSTD-H2②
	240V AC		LSTD-M4②
Incandescent	6.3V AC/DC, 1W		IS-6
	12V AC/DC, 1W		IS-12
	24V AC/DC, 1W		IS-24
	30V AC/DC, 1W		IS-30

1. In place of ②, specify the LED color code from table below.
2. The LED contains a current-limiting resistor and diode bridge.

Part Numbers: Transformers

Description	Appearance	Primary Voltage (50/60Hz)	Part Number
Transformers		120V	TW-T126
		240V	TW-T246
		480V	TW-T486
Half Size		120V	TW-T126S
		240V	TW-T246S

All Transformers step down to 6V.

Ø 1-37/64 (40mm) Mushroom	ALW3-0600	AOLW3-0600
Square Flush/Extended	ALQW-2B0600	AOLQW-2B0600
Ø 1-37/64" (40mm) Pushlock Turn Reset	—	AVLW3-0600
Ø 1-37/64" (40mm) Push-Pull	—	AYLW4-0600

Part Numbers: Lamp Circuit Components

Style	Application	Part Number
Short Lamp Holder	Used with a Half-size Transformer, or AC Adaptor and one contact block	TW-LH1
Long Lamp Holder	Used with an AC Adaptor or Full-size Transformer and two contact blocks Used with Half-size Transformer and three contact blocks Used with Direct Voltage Adaptor and two contact blocks	TW-LH2
Lead Holder	Used with TW-LH2 holder when using four contact blocks	TW-LH3
Full Voltage Adaptor	All full voltage units.	TW-DA1B

Part Numbers: Transformers

Description	Appearance	Primary Voltage (50/60Hz)	Part Number
Transformers		120V	TW-T126
		240V	TW-T246
		480V	TW-T486
Half Size		120V	TW-T126S
		240V	TW-T246S

All Transformers step down to 6V.

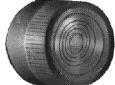

Part Numbers: Contact Blocks

Part Number		
	1NO	1NC
Standard Exposed Screw	HW-C10	HW-C01
	HW-C10R (early make)	HW-C01R (late break)
Fingersafe (IP20), CE marked	HW-F10	HW-F01
	HW-F10R (early make)	HW-F01R (late break)
Dummy Block		
	TW-DB	

1. Dummy blocks (no contacts) are used with an odd number of contact blocks.
2. Use of early and late break contacts creates a make before break function

Illuminated Pushbuttons (Sub-Assembled) con't

Part Numbers: Lenses

Style	Part Number	
	Non-Marking	Marking
Round Extended (Incandescent)	ALW2L-②	ALW2BL-②
		
Round Extended (LED)	ALW2LD-②	ALW2BLD-②
		
Square Extended	—	ALQW2BL-②
		
Ø 1-37/64 (Ø 40mm) Mushroom	ALW4L-②	ALW4BL-②

1. The truth table indicates the operating position of contact block when the operator is switched to that position.

X = On (closed contacts) O = Off (open contacts)

X—X = Overlapping Contacts: Remain on (closed contacts) when switch is moved between these two positions.

2. All knob and lever selector switches come in black. Other colors are available by ordering the knob or lever separately.

3. Every key selector switch uses an identical key. The key is removable in any maintained position. If a different configuration is required, contact an IDEC representative for more information.

4. Custom contact configurations are available, see page A-146 or contact IDEC for details.

Non-Illuminated Selector Switches (Sub-Assembled)

 1. In place of ①, specify the voltage code. In place of ②, specify the Lens/LED color code. In place of ③, specify the Full Voltage code.

2. The truth table indicates the operating position of contact block when the operator is switched to that position.

X = On (Closed Contacts) O = Off (Open Contacts)

3. For custom contact configuration, see page A-146. Contact IDEC for details.

① Transformer Voltage Code

Voltage	Code
120V AC	12
240V AC	24
480V AC	48

 All transformers step down to 6V.

② Lens Color Code

Color	Code
Amber	A
Green	G
Red	R
Blue	S
White	W
Yellow	Y

③ Full Voltage Code

Voltage	Code
6V DC	6
12V AC/DC	12
24V AC/DC	24
120V AC	120 (LED only)
240V AC	240 (LED only)

④ Lamp Type Code

Lamp	Code
Incandescent	Blank
LED	D

Illuminated Selector Switches (Sub-Assembled)

Adaptor* + **Contact Block** + **Operator** + **Lamp/Lead Holder†** + **Lamp** + **Lens** = **Complete Part**

A

1.* AC adaptor is used with LED units, and a transformer is used with incandescent units.
Full voltage LED, or incandescent units require a full voltage adaptor (TW-DA1).

2. † Lamp holder is not included with operators, order separately.
Lead holder is used when using 3 or more contact blocks. Order separately.

Part Numbers: Operators

Positions	Description	Part Number
2	Maintained	ASLW200
	Spring return from right	ASLW2100
	Spring return from left	ASLW2200
3	Maintained, cam 1	ASLW300-1
	Maintained, cam 2	ASLW300-2
	Maintained, cam 3	ASLW300-3
	Spring return from right, cam 1	ASLW3100-1
	Spring return from right, cam 2	ASLW3100-2
	Spring return from left, cam 1	ASLW3200-1
	Spring return from left, cam 2	ASLW3200-2
	Spring return from left/right, cam 1	ASLW3300-1
	Spring return from left/right, cam 2	ASLW3300-2

Different cams produce different contact action. For details, Contact Arrangements on page A-146.

Part Numbers: Lenses (Knobs)

Description	Part Number
Knob (Incandescent)	ASLWLD-②
Knob (LED)	ASLWDDY-②

LED Knobs are lighter in color than incandescent knobs, in order to compensate for the inherent color of the LED. Use an incandescent lens, when using blue LEDs

Part Numbers: Lamps (LED)

Type	Voltage	Current	Part Number
LED	6V AC	20mA	LSTD-6-②
	12V AC/DC	20mA	LSTD-1-②
	24V AC/DC	20mA	LSTD-2-②
	120V AC	10mA	LSTD-H2②
	240V AC		LSTD-M4②
Incandescent	6.3V AC/DC, 1W		IS-6
	12V AC/DC, 1W		IS-12
	24V AC/DC, 1W		IS-24

1. In place of ②, specify the LED color code.
2. The LED contains a current-limiting resistor and a protection diodes.

② LED/Lens Color Code

Color	Code
Green	G
Red	R
Blue	S
White	W
Yellow	Y
Amber	A

Illuminated Selector Switches (Sub-Assembled) con't

Part Numbers: Contact Blocks

Description	Part Number	
	1NO	1NC
Standard Exposed Screw	HW-C10 HW-C10R (early make)	HW-C01 HW-C01R (late break)
Fingersafe (IP20), CE marked	HW-F10 HW-F10R (early make)	HW-F01 HW-F01R (late break)
Dummy Block	TW-DB	

1. Dummy blocks (no contacts) are used with an odd number of contact blocks.

2. Use of early and late break contacts creates a make before break function

Part Numbers: Transformers

Description	Appearance	Primary Voltage (50/60Hz)	Part Number
Transformers		120V	TW-T126
		240V	TW-T246
		480V	TW-T486
Half Size		120V	TW-T126S
		240V	TW-T246S
Full Voltage Adaptor		Used with all full voltage units	TW-DA1B

All Transformers step down to 6V.

Part Numbers: Lamp Circuit Components

Style	Application	Part Number
Short Lamp Holder	Used with a Half-size Transformer, or AC Adaptor and one contact block	TW-LH1
Long Lamp Holder	Used with an AC Adaptor or Full-size Transformer and two contact blocks Used w/Half-size Transformer and three contact blocks Used w/Direct Voltage Adaptor and two contact blocks	TW-LH2
Lead Holder	Used w/TW-LH2 holder when using four contact blocks	TW-LH3

A

Contact Arrangement Charts

How to Read Contact Arrangement Charts

To determine contact block mounting position, first make sure the selector switch is oriented as shown on the right

Contact Arrangement

Type and quantity of switch contacts

Circuit Number

* N/D = No designation required

Contact Block Mounting

Position or mounting contact blocks on operator

Operator Position

Truth table indicates the operating position of contact block when operator is switched to that position.

X = On (Closed Contacts)
O = Off (Open Contacts)
X—X = Overlapping Contacts: Remain on (closed) when switch is moved between these two positions

Contact Block Part Number

Part number to use when ordering sub-assembly contact blocks, as required for use with corresponding mounting position

		4	X	—X	0	TW-C01					

1. Each operator sub-assembly is available as a "-1" and a "-2" for 3-position selector switches. The internal cam of a "-1" is different from that of a "-2". This results in designated combinations of open and closed contacts in the various operator positions.
2. N/D = No circuit number designation required in assembled part number.
3. X = On (closed contacts) O = Off (open contacts). X—X Overlapping contacts remain on (closed) when switch is moved between these two positions.

Custom Selector Switch Building Guide

To build a custom selector switch, follow these steps.

Step 1: How many positions of the switch are needed?

of positions
(2, 3, 4, 5)

A**Step 2: How many contacts should there be?**

of isolated contacts
(maximum 6)

Step 3: Fill in the Truth Table

(X = closed, 0 = open)

Knob Position

	1	2	3	4	5
C	1				
o	2				
n	3				
t	4				
a	5				
c	6				
s					

Step 4: If building a 2 position selector, skip this step. (2 position selectors have only one cam)

If building a 3, 4, or 5 position selector, determine appropriate cam as follows:

Look at Row 1 from above table and locate an identical row in the operator truth tables (See next page).

Repeat for all rows. The user must find one operator that contains all rows from above table.

Record the operator cam version.

Operator CAM Version
(-1, -2, -3 for 3 position)
("blank", -1 for 4 position)
("blank", -1 for 5 position)

Step 5: Build by placing appropriate contact in appropriate mounting position for each desired row on operator cam truth table. "L" and "R" refer to mounting on left or right side of operator as viewed from the front of the panel.

Caution: Before putting any custom selector switch into use, the user should use an ohmmeter to test for desired performance.

1. For Operator Truth Tables, see next page.
2. For examples of how to assemble selector switches, see A-106

Operator Truth Tables

Use the following tables to build custom selector switches.

2 Position Selector Switches

Contact	Mounting Position	Operator Position

Instructions — TW Serie

Instructions for Switches and Pilot Devices

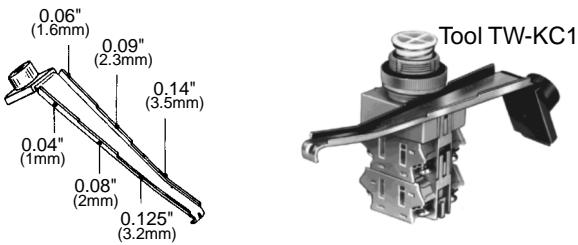

TW Series: Adjustment for Panel Thickness

The panel thickness ring provides adjustment from 0.04" to 0.24" (1 to 6mm) in 0.004" (0.1mm) increments. Rotate the ring until the markings around the periphery are aligned for the desired thickness, as shown below.

A

Note: When a nameplate or an anti-rotation ring is used, add 0.03" (0.8mm) to the panel thickness dimension.

An adjustment for panel thicknesses shown below can be made quickly by using the contact block remover tool.

Instructions con't

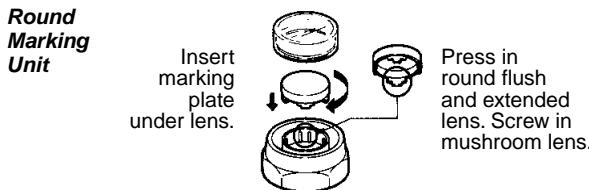

Pilot Lights and Pushbuttons

IMPORTANT: Install the body of the TW control unit with the panel thickness scale facing up.

Octagonal and Round Bezels

Octagonal and round bezels screw into the operator. Use the locking ring wrench (optional) for secure tightening and easy removal. Round flush and extended buttons snap onto the operator base. Mushroom buttons screw onto the operator base.

Every round lens can be used with or without legend markings. Engraving can be done on a white translucent plate which is placed in the lens, or clear mylar can be printed and placed in the lens.

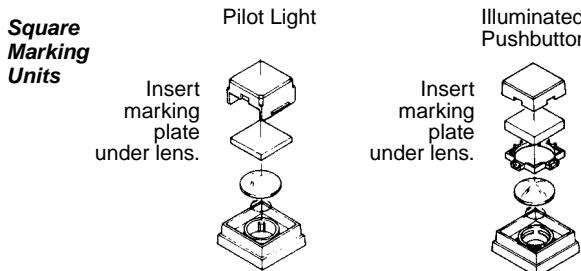

A

Square Bezels

Square bezels are installed in a 3-step procedure. First install the base plate from the front. Then install the lock nut using the nut locking wrench (optional). Finally, install the square bezel, which snap-fits onto the base plate. Square buttons also snap onto the operator base.

Every square lens can be used with or without legend markings. Engraving can be done on a white translucent plate which is placed in the lens, or clear mylar can be printed and placed in the lens. Square units include a round waterproof lens which screws into the operator. The square outer lens snaps on.

To remove square lens from operator, place a screwdriver under the indentation on the side of the lens. To remove the marking plate, place a screwdriver under the indentation and lift out the plate. The lens retainer can be removed by pressing a 3/16" screwdriver into one of the recesses.

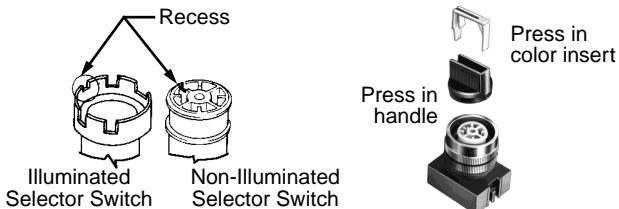

**Marking Plate Engraving Area**

Shape	Engraving Area	Used With	Part Number
Round	Ø 0.55" (14mm)	Illuminated pushbuttons	ALW2BP
	Ø 0.55" (14mm)	Pilot lights	APW2BP
Mushroom	Ø 0.55" (14mm)	Illuminated mushroom	ALW3BP
Square	□ 0.83" (21mm)	Square pilot lights	APQW1BP
Square	□ 0.83" (21mm)	Square illuminated pushbuttons	ALQW2BP

Instructions con't

Selector Switches

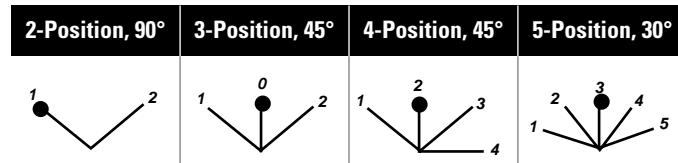

The operator shaft of each unit has a recess to identify in which direction to install the handle. Align the handle with the recess. Press color insert (TW-HC1) into the handle and then press handle into the operator, as shown below.

A

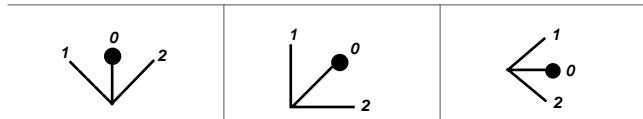

Remove color insert before pulling out the handle.

Standard Operating Positions

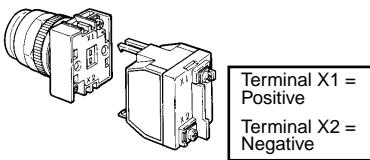

Positions:

Non-illuminated 3-Position Operators

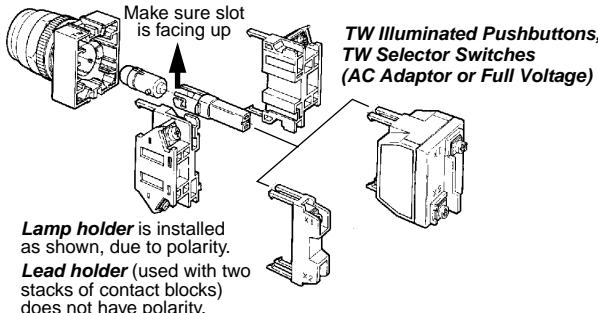

Installation

TW Pilot Lights

Terminal X1 =
Positive
Terminal X2 =
Negative

Lamp holder is installed
as shown, due to polarity.
Lead holder (used with two
stacks of contact blocks)
does not have polarity.

Installation of LED Illuminated Units

AC adaptor units are recommended for use in areas subjected to inductive noise. When using full voltage types, install a protection diode as shown below. Use diode with AC power supply to protect against reverse polarity. Use with DC power supply to protect against surges and noise.

*Make sure that LED illuminated units are installed with
correct polarity, as indicated at the terminals.*
