

# Temperature Meter

For use with Thermocouples

Easy to Use. Easy to Read.

Featuring an acclaimed easy-to-read display and a versatile set of inputs, the Temperature Meter takes the APM into a wide range of new industrial applications.

The programmable scale and custom annunciators mean users can tailor the meter to display their critical parameters exactly how they want, while the dynamic backlighting, in conjunction with setpoints, means operators are visually alerted when a parameter is out of range. The two outputs can be used to control other systems in the process, meaning the APM Temperature Meter is much more than just a display.

Trumeter's innovative input signal optimization achieves accuracy of 0.25% for precise measurement, display and control. Designed for use with thermocouples, the Temperature meter allows the user to configure up to 20 points in a non-linear conversion table via the APM Configurator application in addition to the inbuilt thermocouple linearisation.
