# Terminal Blocks

## Safety Precautions

- Remove power to the terminal blocks before starting installation, removal, wiring, maintenance, and inspection of the products. Failure to remove power may cause electrical shocks.
- For wiring, use wires of proper size to meet voltage and current requirements. Tighten the terminal screws to the recommended tightening torque. Failure to tighten the terminal screws may cause overheating and fire. Also, the screws may become loose due to vibrations. Tighten regularly.
- The recommended tightening torque is shown below:

Screw Size	Tightening Torque (N·m)	Screw Size	Tightening Torque (N·m)
M3	0.6 to 1.0	M6	3.9 to 5.4
M3.5	1.0 to 1.3	M8	10 to 13.5
M4	1.4 to 2.0	M10	21 to 28
M5	2.6 to 3.7	M12	38 to 49
		M116	83 to 116

- For large capacity types, take into consideration the tension of the wires and tightening torque and make sure that the crimping terminals are not twisted.
- Grooves on the head of the hex bolt, for large capacity types are for temporary tightening. For proper tightening, use an applicable socket wrench and tighten within the range of the recommended tightening torque.
- Use an insulated crimping terminal.
- Install a dust cover after wiring.

## Selecting Terminal Blocks by Current According to JIS Standards

IDEC's terminal blocks are compliant with JIS C 2811, and JIS C 8201-7-1. The current varies depending on the operating conditions (wire type, number of bundle wire, operating temperature, etc.). See the table below for choosing the terminal block.

When using the terminal blocks as UL, CSA, and TÜV approved products, refer to UL, CSA, and TÜV ratings.

Applicable Wire (mm <sup>2</sup> )	1.25	2	3.5	5.5	8	14	22	38	60	100	150	200	240	325

## Current vs. Temperature Rise at Bus Bars

### How to read the graph

When using IDEC terminal blocks, make sure that the operating temperature and the temperature of the bus bars do not exceed 100°C. However, the upper limit of the temperature rise is limited to 45°C by JIS C 2811.

Operating temperature + Temperature rise at bus bars ≤ 100°C

Note: Select wires according to the allowable temperature, operating temperature, and temperature rise of bus bars.

### About SCCR of Terminal Block

When exporting machine or systems to the USA, the smallest short-circuit current rating of the control board's main circuit must be displayed as SCCR (short-circuit current rating) value. SCCR is specified by UL508A-2001, Supplement SB, Table SB4.1. The value is 10kA for terminal block.

# BN-W/BNH-W series Terminal Blocks

**UL recognized, CSA certified, and TÜV compliant.**  
**Touch-down terminals reduce wiring time.**

- Molded from UL94V-0 material with excellent flame and shock resistance.
- Terminal blocks can be mounted on a 35-mm-wide DIN rail and 30-mm-wide IEC type C rail.

- 9.5-mm-wide marking strips can be used on all models. 17-mm-wide sliding type marking strips also available. (BN10W to BN30W)
- Terminal blocks of different shapes and capacities can be installed without using an end plate. (BN/BNH10W to BN/BNH150W)
- Screw and stud terminals available for large capacity terminal blocks.
- Additional mounting and removal of terminals is easy. (BN/BNH10W to BN/BNH30W)
- Complies with JIS C 8201-7-1.
- UL recognized, CSA certified, and EN compliant (TÜV approved). (Except common terminal and models with fuse)
- UL recognized for field wiring (FW2).

Applicable Standards	Mark	Certification Organization/File No.
UL1059		UL recognized File No. E78117
CSA C 22.2 No.158		CSA File No. LR64803

## Material

Parts Name	Material
Housing	Modified PPE
Bus Bars	Brass (Nickel-plated)
Terminal Screw	Steel (Zinc chrome-plated)
Spring	Stainless steel (touch-down type only)

**Touch-down terminal blocks reduce wiring time.**  
**(BNH-W/BNDH-W Series)**

1. Insert the Crimping Terminal
2. Push the Screw Down
3. Tighten the Screw

Terminal screw is always in the open position. No need to loosen the screw.

Push the screw down to temporarily hold the wire in place.

The screws can be tightened easily with a pneumatic screwdriver.

## General Ratings

Dielectric Strength	2500V AC, 1 minute
Insulation Resistance	100 MΩ minimum
Operating Temperature	-25 to +55°C (no freezing)
Storage Temperature	-25 to +70°C (no freezing)
Operating Humidity	45 to 85% RH (no condensation)

Note1: The rated applicable wire size is 1.25 mm<sup>2</sup>, but 2 mm<sup>2</sup> wires can also be connected.  
The wire size in ( ) does not comply with JIS standards.

Note2: Do not remove the built-in common jumper. Common terminal type terminal blocks cannot be disassembled.

Note3: Make sure that all terminal screws are tightened to an appropriate tightening torque before power is applied.

Note4: Specifications are in compliance with JIS C 8201-7-1 except values in ( ).

## Application Example

## Features

- All terminals are short-circuited by a built-in common jumper. External jumpers are not required.
- Accessories (marking strip, cover, and rails) are compatible with standard types.
- Common terminal type terminal blocks can be combined with other standard types as they are identical in shape and in size as BN15MW.
- Color: Light Gray

### Installing the Sliding Marking Strip

1. Insert the marking strip into the groove of the top of the marking strip holder.

3. Insert the marking strip holder into the recess of the end plate.

2. Installing the end plate  
Attach the end plates to the terminal blocks and secure with end clips.

4. Press the dust cover to fit onto the bottom groove of the end plate.

### Movement

• Sliding movement of the marking strip holder

When sliding the marking strip holder, slide by holding both edges of the holder.

• To lock the marking strip holder

To lock the marking strip holder, lock by holding both edges of the holder.

# BN-W/BNH-W Series Terminal Blocks

## Calculating Rail Lengths and Mounting Centers

- BNCA, BNCP, BAA, BAP, and BNJA Rails

$$L_1 = 12.5 \times N$$

$$L_2 = L_1 - 25$$

Note: This formula is for calculating the maximum rail length including tolerance. Depending on the combination of terminal blocks, the required rail length may be shorter than the calculated value, particularly when many terminal blocks are combined.

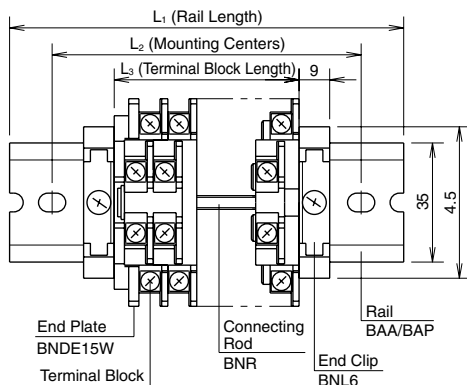

N: Rounded up numerical number from the calculated value of M.  
(Example: N for 19.1 is 20)

$$M = \frac{(A + 0.1)n + B + C}{12.5}$$

- A: Thickness of each terminal block
- B: Thickness of end plate
- C: Thickness of end clip when using 2 pieces of:
  - BNL6 = 56.0 mm
  - BNL7 = 62.5 mm
  - BNL8 = 67.0 mm
- n: The number of terminal blocks

### Rail Length (Double-Deck)

### Mounting Centers (Double-Deck)

### Calculating the length (mm)

Part No.	BND15W BNDH15W BND15WT	BND15LW BNDH15LW
L1 (*1)	12.5 × N	
L2 (*2)	L <sub>1</sub> - 25	
L3 (*1, *2)	8 × n + 9	10.5 × n + 10.3
Connecting Rod Length (*1, *2)	8 × n + 8.7	10.5 × n + 10

N: Rounded up numerical number from the calculated value of M.  
(Example: N for 19.1 is 20)

For BND15W, BNDH15W, BND15WT For BND15LW, BNDH15LW

$$M = \frac{(8 \times n + 9 + 62.5)}{12.5}$$

$$M = \frac{10.5 \times n + 10.3 + 62.5}{12.5}$$

\*1: This formula is for calculating the maximum rail length including tolerance. Depending on the combination of terminal blocks, the required rail length may be shorter than the calculated value, particularly when many terminal blocks are combined.

\*2: The length will be 1.5 mm longer when end plates BNDE15W2 and BNDE15LW2 are used.

### Calculating the length (mm)

Part No.	BND15W BNDH15W BND15WT	BND15LW BNDH15LW
Mounting Centers (*1, *2)	8 × n + 24.2	10.5 × n + 25.5
Connecting Rod Length (*1, *2)	8 × n + 20.2	10.5 × n + 21.5

n: The number of terminal blocks

# BN-W/BNH-W Series Terminal Blocks

## Instructions

### How to Use Touch-Down Terminals

1. With the terminal screws in the up position, insert a ring crimping terminal.

2. Push down the head of the screw lightly to hold the crimping terminal.

3. When the wiring is in position, tighten all the screws simultaneously.

4. To remove the wiring, loosen the screw and lightly push up.

### Installation and Removal on Rails

### Additional Installation and Removal (on DIN Rail)

- The following terminal blocks can be added or removed: BN10W, BNH10W, BN15MW, BNH15MW, BN15LW, BNH15LW, BN30W, BNH30W, BN15MWT, BNH15MWT, BN15LWT, BNH15LWT
- Can be installed/removed for two to three times maximum.

### Securing the Ends of the Marking Strip

The ends of the marking strip can be secured with a marking strip fastener (or end plate).

To Secure the Marking Strip

Installing End Plate

For double-deck, use an end plate to secure marking strips (BNDE15W2, BNDE15LW2).

### Installation of Double-Deck Terminal Blocks (BND)

Rail Mount (photo: when using BND15W, BNDH15W, BNDE15W2)

BND15W/BNDH15W

1. Install end plate. Then mount the terminal blocks onto the DIN rail.
2. Insert connecting rod (BNR) through each hole of the terminal blocks.
3. Secure the ends of the connecting rods with connecting nuts (BNN1).
4. To prevent side-to-side movement on the DIN rail, use the BNL6 end clips at both ends of the rail.

### Surface Mount

BND15W/BNDH15W

1. Assemble a row of terminal blocks with end plates on exposed ends.
2. Use BNDL2 mounting clips at both ends of a row.
3. With the two holes of the mounting clip (BNDL2) aligned with the terminal block holes, insert a connecting rod (BNR) through each hole.
4. Secure the ends of the connecting rods with the connecting nuts (BNN1).

## Instructions

### Dust Covers on the Lower Deck Terminal of Double-Deck Terminal Blocks

#### Installing Dust Covers on Lower Deck Terminals

1. Press the lower end of the dust cover into the groove.

2. With the lower end of the dust cover pressed into the groove, push in the top end in the direction of the arrow.

#### Removing Dust Covers from Lower Deck Terminals

Turn the power off before removing the dust cover.

1. Hold the end of the dust cover which is extruding from the end plate.

2. Lift up in the direction of the arrow.  
3. If the dust cover cannot be removed all at once, place fingers between the terminal block and dust cover, and slowly remove the dust cover.

#### Length of Double-Deck Dust Covers

Upper-Deck Dust Cover  
BNC230

Lower-Deck Dust Cover  
BNC240

Cut required length depending on the number of terminal blocks used. (Length in mm)

Terminal Block	Dust Cover	1-pole	2-pole	3-pole	4-pole	5-pole	6-pole	7-pole	8-pole	n-pole
BND(H)15W BND(H)15WT	Upper Deck	12	20	28	36	44	52	60	68	$8(n+1) - 4$
	Lower Deck	16	24	32	32	48	56	64	72	$8(n+1)$
BND(H)15LW	Upper Deck	16	26.5	37	47.5	58	68.5	79	89.5	$10.5(n+1) - 5$
	Lower Deck	21	31.5	42	52.5	63	73.5	84	94.5	$10.5(n+1)$

#### Securing Marking Strip with Marking Strip Fasteners for Double-Deck Terminal Blocks

Because marking strips can be secured without using marking strip fasteners, installation time can be shortened. Also, marking strips can be inserted and removed after installation.

#### Notes on Wiring

##### Crimping Terminals

When using crimping terminals, be sure to use insulated terminals to prevent electric shocks.

##### Without Crimping Terminals

- Insert the wire until the insulation comes into contact with the terminal metal part.
- Strip the insulation so that the wire is longer than the width of the wire clamp.
- When connecting two wires, use wires of the same size.

**Quick-mount terminal blocks for mounting on 35-mm-wide DIN rails. Current capacities from 16A to 400V (600V).**

- Snaps on to 35-mm-wide DIN rails.
- Wide range of current capacities from 16A to 400A. Insulation voltage is 600V.
- No end plates are required.
- 3-pole units, fuse blocks with blown fuse indicators available.
- Large capacity types (BA811S, BA911S) can be mounted directly to panels.
- Material: PPE (black)
- Complies with JIS C 2811.
- UL recognized and CSA certified. (BA111T, BA211T, BA311T, BA411S, BAF111SU, BAF111SNU)

## Calculating Rail / Connecting Rod Length

### Calculating Rail Length

For BAA, BAP rails

$$L_1 = 12.5 \times N$$

$$L_2 = L_1 - 25$$

A: Total thickness of each terminal block

B: Tolerance of stacking thickness

0.1 mm per block

C: End Clip

When using 2 pieces of BNL6 or BAL2 = 62.5

N: Rounded up numerical number from the calculated value of M.

(Example: N for 19.1 is 20)

$$M = \frac{A + B + C}{12.5}$$

Note: This formula is for calculating the maximum rail length including tolerance. The rail length may be shorter than the calculated value, depending on how the terminal blocks are combined.

### Calculating Connecting Rod Length

$$L = 42 \times n_1 + 60 \times n_2 + 10.2$$

$n_1$ : BA811S

$n_2$ : BA911S

n: The number of terminal blocks

## Instructions

### Installation of BA811S and BA911S

#### Rail Mount

1. Mount the terminal block on DIN rail.
2. Mount the surface mounting clips (BAL3) on both ends and slide 2 connecting rods (BNR) through the holes in the terminal blocks.
3. Tighten both ends of the connecting rod with a connecting nut (BAN1).
4. Secure the terminal blocks with end clips (BAL2).

#### Surface Mount

1. Mount the terminal block to the panel.
2. Mount the surface mounting clips (BAL3) on both ends and slide 2 connecting rods (BNR) through the holes in the terminal blocks.
3. Tighten both ends of the connecting rod with connecting nuts (BAN1).
4. Secure the terminal blocks to the panel.

### Notes on Wiring

#### Crimping Terminals

- When using crimping terminals, be sure to use insulated terminals to prevent electric shocks.

#### Without Crimping Terminals

- Insert the wire until the insulation comes into contact with the terminal metal part.
- Strip the insulation so that the wire is longer than the width of the wire clamp.
- When connecting two wires, use wires of the same size.

# BN1U Spring-Up Screw Terminal Blocks

## Spring-up screws save up to 30% wiring time (compared to IDEC standard terminal blocks)

- Spring-up screws with temporary hold function.
- M3, M3.5, and M4 types are all in the same height and width.
- The same dust covers, marking strips (9.5-mm-wide), and end plates can be used.
- Can be mounted on a 35-mm-wide DIN rail or 30-mm-wide C type rail.
- Each block can be easily removed from a 35-mm-wide DIN rail using a flat screwdriver.
- UL recognized for field wiring (FW2).
- UL recognized, CSA certified, and EN compliant (TÜV approved).

## Notes on Wiring

- Tighten all terminal screws including unused terminal screws.
- Be careful not to drop a terminal block (without an end plate) as the spring may fall out from the housing.
- Tighten the terminal screw to the recommended tightening torque.

### Crimp Terminals

- When using crimp terminals, be sure to use insulated terminals to prevent electrical shocks.

### Without Crimp Terminals

- Insert wire until the insulation comes into contact with the bus bar.
- Strip the insulation so that the wire is longer than the washer width. (BN1U-16W: approx. 9 mm, BN1U-20W: approx. 9 mm, BN1U-40W: approx. 11 mm)
- When connecting two wires, use wires of the same size.

# BTB/BTBH series Surface Mount Terminal Blocks

## Surface mount terminal blocks with 2 to 30 poles. Touch-down terminals reduce wiring time.

- Self-lifting (BTB series) and touch down terminal (BTBH) available.
- Flame-resistant plastic (UL94V-0).
- Terminal blocks can be easily combined and all poles can be secured with a pair of connecting rods and nuts.
- Complies with JIS C 8201-7-1.
- UL recognized and CSA certified.

## Safety Precautions

### Notes on Wiring

#### Crimping Terminals

- When using crimping terminals, be sure to use insulated terminals to prevent electric shocks.

#### Without Crimping Terminals

- Insert the wire until the insulation comes into contact with the terminal metal part.
- Strip the insulation so that the wire is longer than the width of the wire clamp.
- When connecting two wires, use wires of the same length.
- To prevent damage, ensure to use plain washers when installing.

# BD Series Terminal Blocks

## Space-saving miniature terminal blocks. Surface mount and DIN rail mount available.

- Surface mount terminal blocks available.
- Rail mount can be mounted on 15-mm-wide DIN rails.
- BD8 rail mount available in black or blue color.
- Flame-resistant plastic (UL94V-0).
- Can be mounted on the rail easily.
- Space-saving low profile style
- Safe robust construction
- Complies with JIS C 2811.
- UL recognized and CSA certified.

## Surface Mount Dimensions

- L (Length of the terminal block) and P (mounting hole centers) are nominal dimensions for each terminal block. Because the terminal blocks are combined together with bolts, there may be differences in the dimensions depending on the number of poles combined.

## Calculating the Rail Length (When the same type terminal block is mounted)

### BDA and BDP Rails

$$L_1 = 12.5 \times N$$

$$L_2 = L_1 - 25$$

N: Rounded up numerical number from the calculated value of M.  
(Example: N for 19.1 is 20)

$$M = \frac{(A + 0.1)n + 68.5}{12.5}$$

A: Thickness of each terminal block

n: The number of terminal blocks

Note: This formula is for calculating the maximum rail length including tolerance. Depending on the combination of terminal blocks, the required rail length may be shorter than the calculated value, particularly when many terminal blocks are combined.

# BD Series Terminal Blocks

## Instructions

### Installation of Rail Mount Terminal Blocks

### Installing and Removing the Marking Strip

When removing the marking strip, pull out the end of the marking strip with the tip of a screwdriver.

To install, insert the marking strip into the terminal block from one end and press in the other end of the marking strip.

### When using DIN Rail

1. Determine the length of the DIN rail according to the width of the terminal blocks.
2. Assemble the terminal blocks with an end plate on one side, and then install them onto the DIN rail. (When mounting BD8, BD7, and BDK5 series on the same DIN rail, use end plates at the end of assemblies of each series.)
3. Install an end clip (BDL11) so that the terminal blocks are mounted in the center of the DIN rail. See "Installing the end clip" below.
4. Insert the marking strip and fasten with another end plate.
5. Install the end clip (BDL11) on the other end of the terminal block
6. Cover the terminal block with the dust cover.

### Installing the end clip

Hook the stamped side of the end clip on the DIN rail.

Push the end clip on the DIN rail.

Slide the end clip to the stamped side and tighten the screw. Recommended tightening torque: 0.8 N·m

### Installing Surface Mount Terminal Blocks

To install surface mount terminal blocks, use four screws and tighten four corners of the terminal blocks to a torque of 1.0 N·m maximum.

For screw types and tightening torque, see the table below. See page 49 for mounting hole dimensions.

Screw Size (For BD8)	Screw Size (For BD/BDK5)	Tightening Torque
M4 screw only	—	1.0 N·m maximum
M4 screw + M4 plain washer	M3 screw + M3 plain washer	
	M3.5 screw + M3.5 plain washer	
M4 screw + M4 plain washer + M4 spring washer	M3 screw + M3 plain washer + M3 spring washer	
	M3.5 screw + M3.5 plain washer + M3.5 spring washer	

### Notes on Wiring

#### Crimping Terminals

- When using crimping terminals, be sure to use insulated terminals to prevent electric shocks.

#### Without Crimping Terminals

- Insert the wire until the insulation comes into contact with the terminal metal part.
- Strip the insulation so that the wire is longer than the width of the wire clamp.
- When connecting two wires, use wires of the same size.
