True RMS 3-Phase, 3-Phase+N, Multifunction

Types DPC01, PPC01

CARLO GAVAZZI

DPC01

PPC01

- TRMS 3-phase over and under voltage, phase sequence, phase loss, asymmetry and tolerance monitoring relay
- Detect when all 3 phases are present and have the correct sequence
- Detect if all the 3-phase-phase or phase-neutral voltages are within the set limits
- Detect if asymmetry and tolerance are within the set value
- Separately adjustable setpoints
- Separately adjustable delay functions (0.1 to 30 s)
- Output: 2 x 8 A relay SPDT NE
- For mounting on DIN-rail in accordance with DIN/EN 50 022 (DPC01) or plug-in module (PPC01)
- 45 mm Euronorm housing (DPC01) or 36 mm plug-in module (PPC01)
- LED indication for relays, alarm and power supply ON

Product Description

3-phase or 3-phase+neutral line voltage monitoring relay for phase sequence, phase loss, asymmetry, tolerance, over and under voltage (separately adjustable set points)

with built-in time delay function. Supply ranges from 100 to 690 VAC covered by three multivoltage relays.

Mode of Operation

Asymmetry definition.

Asymmetry is an indicator of the mains quality and it is defined as the absolute value of the maximum deviation among the mains voltages, divided by the nominal voltage of the 3-phase system. The definition changes according to the voltage reference:

- 1) in case of measuring phase-phase voltages:

$$\frac{\max |\Delta V_{PH-PH}|}{V_{\Delta NOM}} \times 100$$

- 2) in case of measuring phase-neutral voltages:

$$\frac{\max |\Delta V_{PH-N}|}{V_{\Delta NOM}} \times 100$$

Tolerance definition.

Tolerance is another indicator of the mains quality and it is defined as the absolute value of the maximum deviation of the mains voltages from the nominal voltage, divided by the nominal voltage of the 3-phase system. The definition changes according to the voltage reference:

- 1) in case of measuring phase-phase voltages:

$$\frac{\max |V_{\Delta NOM} - V_{PH-PH}|}{V_{\Delta NOM}} \times 100$$

- 2) in case of measuring phase-neutral voltages:

$$\frac{\max |V_{\Delta NOM} - V_{PH-N}|}{V_{\Delta NOM}} \times 100$$

Connected to the 3 phases (and neutral) DPC01 and PPC01 operate when all 3 phases are present at the same time and the phase sequence is correct. It can be decided whether to monitor upper and lower voltage level of each phase or their asymmetry and tolerance.

Voltage level monitoring:

if one or more phase-phase or phase-neutral voltage exceed the upper set level or drop below the lower set level, the red LED starts flashing 2 Hz and the respective output relay releases after the set time period.

Asymmetry and tolerance monitoring:

if one or more phase-phase or phase-neutral voltage exceed the set levels the red LED starts flashing 2 Hz and the respective output relay releases after the set time period.

Note: For both functions, if the phase sequence is wrong or one phase is lost, both output relays release immediately. Only 200 ms delay occurs. The failure is indicated by the red LED flashing 5 Hz during the alarm condition.

Example 1

(Mains monitoring - over and under phase-phase voltage) The relay monitors over and under voltage, phase loss and correct phase sequence.

Example 2

(Motor monitoring - starting and operating load -asymmetry and tolerance of phase-neutral voltage) DPC01 and PPC01 ensure correct starting and operating conditions. They monitor the voltage level, phase sequence (correct direction of the motor rotation) and asymmetry.

Frequent failures are fuse blowing and incorrect voltage level. In case of fuse blowing the motor regenerates a voltage in the interrupted phase. The relay detects the failure and reacts due to excessive imbalance among the phases.

Function/Range/Level/Time Setting

Adjust the input range setting the DIP-switches 3 and 4. Select the desired function setting the DIP-switches 5 and 6 as shown below. To

access the DIP-switches open the plastic cover using a screwdriver as shown below.

Centre knobs:

Setting of upper (r) and lower (v) level or setting of asymmetry (ASY) and tolerance (λ) on relative scale.

Lower knobs:

Setting of delay on alarm times (DELAY 1, DELAY 2) on absolute scale: 0.1 to 30 s.
