

### Industries & Applications

**ePLAN®**  
data portal

### Features & Benefits

- ▶ Wide 3 phase input range for global mains voltages
- ▶ Power boost of 120% for 2s to support capacitive loads start-up
- ▶ Smart Hiccup behaviour in short-circuit situation avoids self-heating
- ▶ Parallel mode switch to activate load balancing behaviour
- ▶ Two means of transient protection increase process stability
- ▶ Fast OVP control protects sensitive loads
- ▶ Very low inrush energy peak ( $I^2t$ ) saves cost for input line protection
- ▶ Screw or push-in terminals available to serve individual connection needs
- ▶ High efficiency and low stand-by losses contribute to an eco-friendly energy footprint
- ▶ Strong CC overload behaviour secures process reliability under demanding load conditions
- ▶ DC-OK and inhibit relay contacts for professional integration into applications control architecture
- ▶ Designed to meet the 7 most accepted IEC safety standards
- ▶ Exceeds regulatory EMC standards on radiated emission (Class B), surge immunity and fast transients

### Technical data abstract<sup>1</sup>

<b>Output voltage</b>	<i>nom.</i>	48V <sub>DC</sub>
<b>Adjustment range</b>	<i>max.</i>	45..56V <sub>DC</sub>
<b>Output current</b>	<i>nom.</i>	5A
<b>Output current boost</b>	<i>max.</i>	6A / 2s
<b>Overload behaviour</b>		CC + Hiccup
<b>Hold-up time<sup>2</sup></b>	<i>min.</i>	23 / 46ms
<b>Frequency range</b>	<i>max.</i>	47..63Hz
<b>AC Input voltage</b>	<i>nom.</i>	3x400V <sub>AC</sub>
<b>AC Input voltage range</b>	<i>max.</i>	3x350..575V <sub>AC</sub>
<b>Inrush current<sup>2</sup></b>	<i>max.</i>	34 / 40A

## List of abbreviations

<b>avg.</b>	<i>average</i>	The arithmetic average calculated from a row of values.
<b>CC</b>		Constant output current
<b>chap.</b>		Chapter
<b>Dir.</b>		Directive
<b>eCap</b>		Electrolytic capacitor
<b>EMC</b>		Electromagnetic Compatibility
<b>lac</b>		AC input current under a particular operating condition
<b>lout</b>		DC output current under a particular operating condition
<b>lout_boost</b>		Max. DC output current (time limited) without a shortfall of Uset.
<b>lout_nom</b>		Nominal DC output current
<b>lout_ol</b>		Max. intermittent DC output current in an overload situation and a shortfall of Uset.
<b>lout_sc</b>		Max. short circuit DC output current and Uout close to zero.
<b>ITU</b>		International Telecommunication Union
<b>max.</b>	<i>maximum</i>	The maximum value which a parameter can assume, or which must not be exceeded. As a precondition, none of the other technical parameters exceeds its max./min. value at the same time.
<b>MCB</b>		Miniature circuit breaker
<b>min.</b>	<i>minimum</i>	The minimum value which a parameter can assume, or must not be fallen below. As a precondition, none of the other technical parameters exceeds its max./min. value at the same time.
<b>MTBF</b>		Mean Time Between Failure
<b>nom.</b>	<i>nominal</i>	The ideal or reference value of a technical parameter which is guaranteed under STC. All nominal values in this document refer to each other and represent the general specification of the device.
<b>OCP</b>		Overcurrent protection
<b>OTP</b>		Overtemperature protection
<b>OVP</b>		Overvoltage protection
<b>PELV</b>		Protective Extra Low Voltage
<b>Pout</b>		Output power under a particular operating condition
<b>Pout_boost</b>		Max. output power (time limited) without a shortfall of Uset.
<b>Pout_nom</b>		Nominal output power
<b>PSU</b>		Power supply unit
<b>Reg.</b>		Regulation
<b>SELV</b>		Safety Extra Low Voltage
<b>STC</b>		Standard test conditions (see „1. General“ on page 5)
<b>typ.</b>	<i>typical</i>	The typical value of a parameter is not guaranteed but can be assumed under STC. The min. or max. value must be determined during the engineering process of the end application.
<b>Uout</b>		DC output voltage under a particular operating condition
<b>Uout_nom</b>		Nominal DC output voltage
<b>Uset</b>		Manually set output voltage via voltage potentiometer
<b>UVP</b>		Undervoltage protection
<b>Vac</b>		AC input voltage under a particular operating condition
<b>Vac_nom</b>		Nominal AC input voltage
/		Separator between two values. The conditions to which the values refer can be found in the last column of the table.
..		Specifies a range of values.

## Table data structure

### X. Technical category

Technical parameter	Characteristic (optional)	Values	Condition (optional)
---------------------	------------------------------	--------	-------------------------

## 1. General

### 1.1 Handling of the product

To ensure faultless and safe operation of the products it is required to observe the specified ambient conditions for transport and storage (see "Ambient conditions" on page 9), set-up, assembly, installation, commissioning, operation and maintenance.

### 1.2 Protection enclosure required

The device must be installed in a protective housing or control cabinet to which only qualified personnel have access.

### 1.3 Humid environments

Do not operate the device in a damp environment or in an environment where condensation is likely to occur.

### 1.4 Switch/Circuit-breaker mounting position

A switch or circuit-breaker must be mounted near the equipment.

### 1.5 Observe country-specific regulations

In addition to the product documentation, the relevant country-specific regulations for the installation of the device must be observed.

### 1.6 Prohibited electrical/mechanical modifications

The product must not be modified in any way electrically or mechanically. Modifications can result in fatal injuries and damage to property.

### 1.7 Expiry of the manufacturer's warranty

The power supply is maintenance-free. Repairs can only be carried out by the manufacturer. Opening the housing voids the manufacturer's warranty.

### 1.8 Use of third-party products

If third-party products and components are used for power or voltage increase, buffering (AC or DC side), EMC filtering, redundancies or for DC side load protection, it must be in accordance with the TDK-Lambda product specification.

### 1.9 Standard test conditions

Unless otherwise stated, all values are specified in normal mounting position, at full load, nominal input and output voltages, 25°C (131°F) ambient temperature and a run-in time of 5 minutes.

### 1.10 Normal mounting position

In the normal mounting position, the front side of the product faces into the direction of the Y axis.

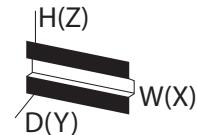

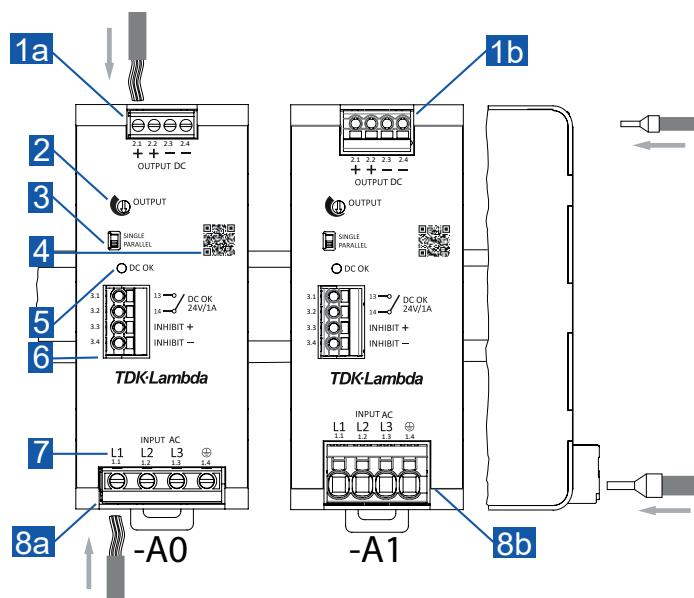

Fig. 1: Illustration of the spatial axis with reference to the DIN-Rail

### 1.11 Description of user elements

- 1a Screw terminal, DC output
- 1b Push-in terminal, DC output
- 2 Single turn potentiometer for adjusting the output voltage
- 3 Dip-switch for configuration as single or parallel operation. When changing the operating mode, the mains voltage must be disconnected.
- 4 Web link to further documentation
- 5 Green DC-OK status LED
- 6 Push-in terminal for signal contacts
- 7 Unique connection identifier usable for end-user wiring diagram
- 8a Screw terminal, AC input
- 8b Push-in terminal, AC input

**i** For more detailed information on the input/output wiring and the connection of the signalling contacts, please refer to "Wiring & Connection" on page 12.

Fig. 2: Description of user elements

## 2. Electrical output

<b>Output voltage [Uout_nom]</b>	<i>nom.</i> 48V <sub>DC</sub>	
<b>Adjustment range [Uset]</b>	<i>max.</i> 45..56V <sub>DC</sub>	
<b>Adjustment tolerance</b>	<i>max.</i> $\pm 3\%$	at upper/lower end position of voltage potentiometer
<b>Factory default</b>	48V <sub>DC</sub>	
<b>Output current [Iout_nom]</b>	<i>nom.</i> 5A	
<b>Boost current [Iout_boost]</b>	<i>max.</i> 6A / 2s	
<b>Overload behaviour</b>	Constant current + Hiccup	see Fig. 4
<b>Overload current</b>	<i>max.</i> 7.5A	400..500V <sub>AC</sub>
<b>Intermittent OL current [Iout.ol]</b>	<i>max.</i> 7.50A / 0.3s <i>avg.</i> 0.75A / 12s	400..500V <sub>AC</sub> 400..500V <sub>AC</sub>
<b>Short-circuit proof</b>	yes	
<b>Instant SC current [Iout_sc]</b>	<i>max.</i> 19A / < 1ms	400..500V <sub>AC</sub>
<b>Start-up delay</b>	<i>max.</i> 1.8s	400..500V <sub>AC</sub>
<b>Rise time</b>	<i>typ.</i> 14 / 13ms <i>typ.</i> 27 / 23ms	400 / 500V <sub>AC</sub> , 0% P <sub>out</sub> 400 / 500V <sub>AC</sub> , 100% P <sub>out</sub> , resistive load
<b>Voltage overshoot</b>	<i>typ.</i> 3V <sub>DC</sub>	400..500V <sub>AC</sub>
<b>Fall time</b>	<i>typ.</i> 28ms	400..500V <sub>AC</sub>
<b>Hold-up time</b>	<i>min.</i> 23 / 46ms	400 / 500V <sub>AC</sub>
<b>Capacitive load</b>	<i>max.</i> 5000μF	
<b>Feedback voltage</b>	<i>max.</i> 63V <sub>DC</sub>	
<b>Line regulation</b>	<i>max.</i> 0.1%	350..550V <sub>AC</sub>
<b>Load regulation</b>	<i>max.</i> 0.2% <i>max.</i> 2.8%	350..550V <sub>AC</sub> 350..550V <sub>AC</sub> , parallel mode
<b>Dynamic response</b>	<i>typ.</i> $\pm 300\text{mVpp}$	350..550V <sub>AC</sub> , transient frequency 10..100Hz
<b>Ripple &amp; noise voltage</b>	<i>max.</i> 20mVpp <i>max.</i> 80mVpp	350..550V <sub>AC</sub> , +25..+70°C <sub>Amb</sub> 350..550V <sub>AC</sub> , -25..+25°C <sub>Amb</sub>

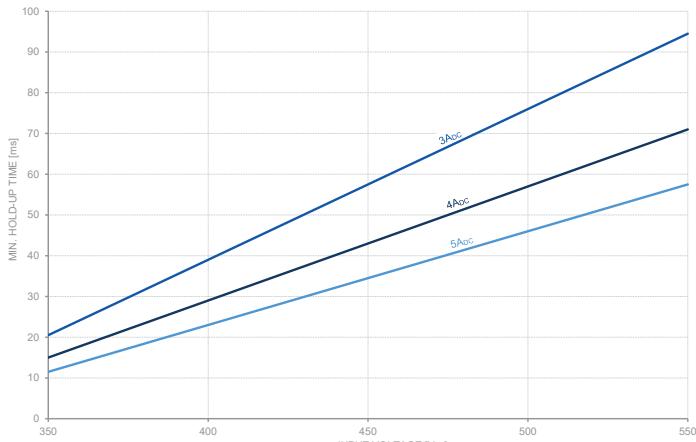

Fig. 3: Hold-up times under different load conditions and in dependence of the input voltage

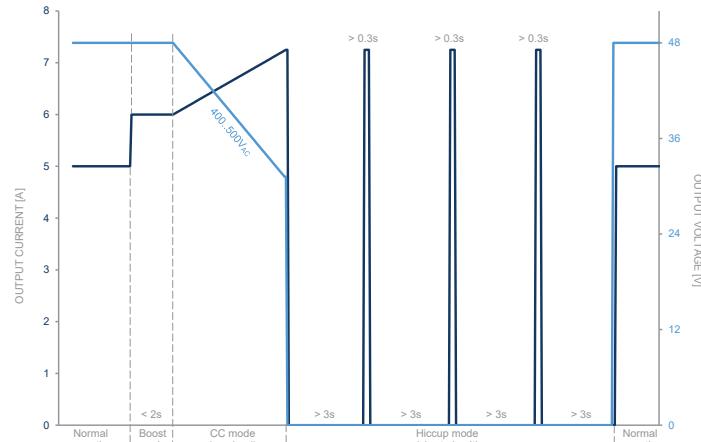

Fig. 4: Output current and voltage under different load conditions

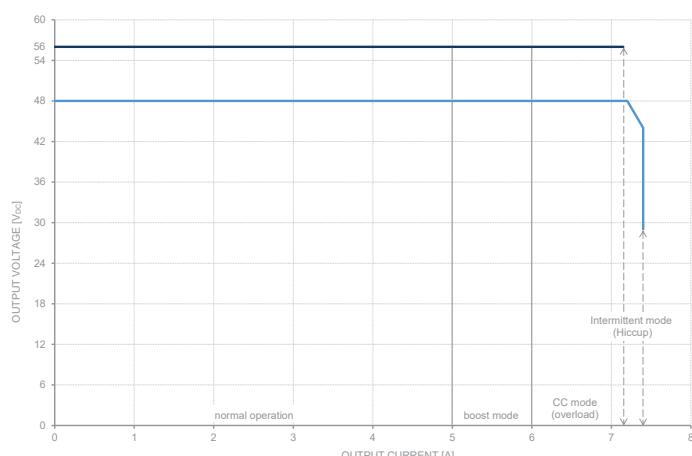

Fig. 5: Output voltage in dependence of output load current

Unless otherwise stated, all values are specified in normal mounting position, at full load, nominal input and output voltages, 25°C (77°F) ambient temperature and a run-in time of 5 minutes.

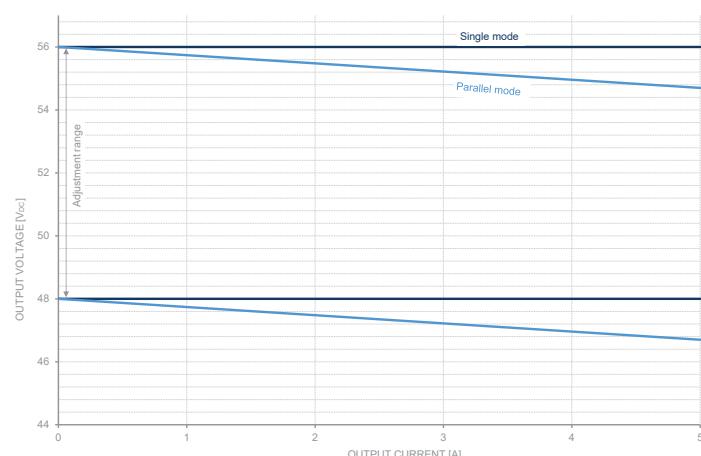

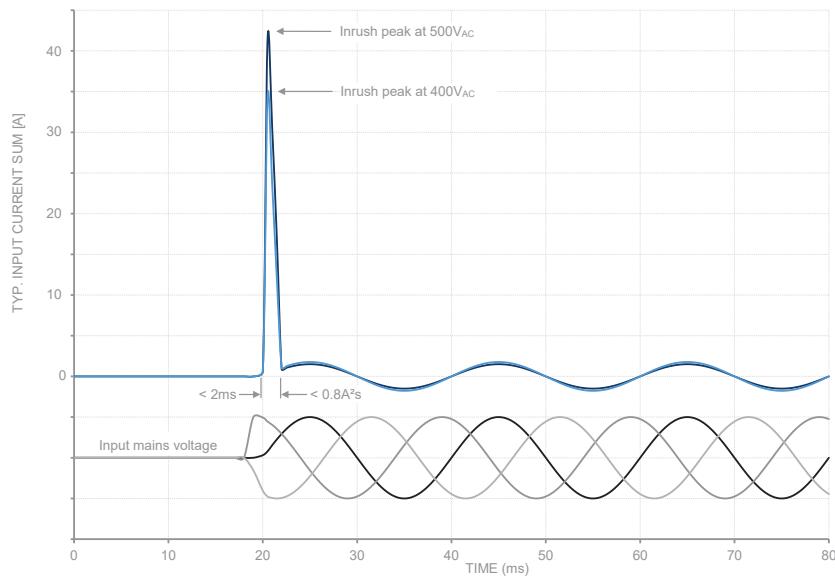

Fig. 6: Voltage drop in parallel mode depending on the load current

### 3. Electrical input

<b>AC power systems</b>	TN, TT, wye	
<b>Mains Frequency</b>	<i>nom.</i>	50 / 60Hz
<b>Frequency range</b>	<i>max.</i>	47 .. 63Hz
<b>AC input voltage [Vac_nom]</b>	<i>nom.</i>	3x400V <sub>AC</sub>
<b>Voltage range</b>	<i>max.</i>	3x350 .. 575V <sub>AC</sub>
<b>Turn-ON voltage</b>	<i>typ.</i>	310V <sub>AC</sub>
<b>Turn-OFF voltage</b>	<i>typ.</i>	275V <sub>AC</sub>
<b>AC input current</b>	<i>max.</i>	3x0.8A
<b>AC input current RMS</b>	<i>max.</i>	3x0.58 / 3x0.49A
<b>Crest factor</b>	<i>typ.</i>	1.40 / 1.67
<b>Inrush current</b>	<i>max.</i>	34 / 41A
<b>Inrush energy</b>	<i>max.</i>	0.3 / 0.8A <sup>2</sup> s
<b>Input capacitance</b>	<i>max.</i>	75μF

**Fig. 7:** Inrush current and energy during start-up phase

#### 4. Performance

<b>Output power [Pout_nom]</b>	<i>nom.</i> 240W	
<b>Boost power [Pout_boost]</b>	<i>max.</i> 288W / 2s	see Fig. 10
<b>Dropped phase power</b>	<i>max.</i> 240W / continuous	2x400..500VAC, not compliant with IEC/EN 61000-3-2 harmonic currents
<b>Apparent input power</b>	<i>typ.</i> 397 / 421 VA	400 / 500VAC
<b>Active input power</b>	<i>typ.</i> 256 W	400..500VAC
<b>Reactive input power</b>	<i>typ.</i> 304 / 335 Var	400 / 500VAC
<b>Power factor</b>	<i>min.</i> 0.6	400..500VAC
<b>Conversion efficiency</b>	<i>min.</i> 93.8 / 94.0% <i>avg.*</i> 93.0 / 92.6%	400 / 500VAC 400 / 500VAC
<b>Power consumption</b>	<i>max.</i> 16.0W <i>avg.*</i> 18.1 / 19.2W	400..500VAC 400 / 500VAC
<b>Stand-by consumption</b>	<i>max.</i> 1.9 / 2.3W	400 / 500VAC

\*Weighted average: 10%@Pout=20%, 50%@Pout=50%, 20%@Pout=80%, 20%@Pout=100%

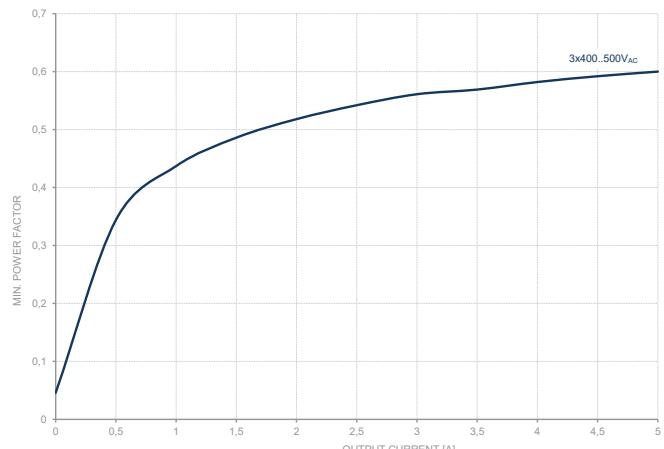

Fig. 11: Input power factor in dependence of the output current

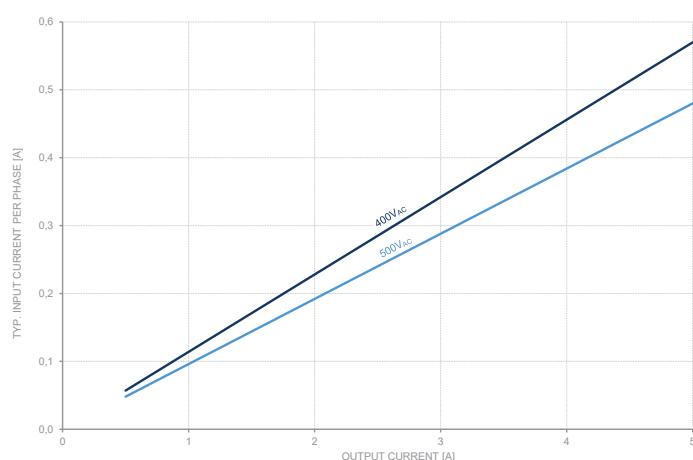

Fig. 12: Typical input current per phase in dependence of the load current

Unless otherwise stated, all values are specified in normal mounting position, at full load, nominal input and output voltages, 25°C (77°F) ambient temperature and a run-in time of 5 minutes.

## 5. Ambient conditions

<b>Ambient storage temperature</b>	<i>max.</i>	-40 .. +85°C <sub>amb</sub> (-40 .. +185°F <sub>amb</sub> )	
<b>Ambient operating temperature</b>	<i>nom.</i>	-25 .. +55°C <sub>amb</sub> (-13 .. +131°F <sub>amb</sub> )	normal mounting position
	<i>max.</i>	-25 .. +70°C <sub>amb</sub> (-13 .. +158°F <sub>amb</sub> )	normal mounting position
<b>Power derating</b>	<i>min.</i>	2.6W/°C <sub>amb</sub> (1.44W/°F <sub>amb</sub> )	>55°C <sub>amb</sub> (>131°F <sub>amb</sub> ), not actively controlled
<b>Cooling concept</b>		Natural convection	
<b>Relative storage humidity</b> IEC 60068-2-30	<i>max.</i>	95%	non-condensing
<b>Relative operation humidity</b> IEC 60068-2-30	<i>max.</i>	95%	non-condensing
<b>Operating altitude</b>	<i>nom.</i>	3000mASL (9842ftASL)	
	<i>max.</i>	6000mASL (19685ftASL)	not UL approved
<b>Percental power derating</b>	<i>min.</i>	7% per 1000m (7% per 3281ft)	>3000mASL (>9842ftASL)
<b>Temperature derating</b>	<i>min.</i>	5°C per 1000m (9°F per 3281ft)	>3000mASL (>9842ftASL)
<b>Atmospheric pressure</b>	<i>nom.</i>	689hPa	
	<i>max.</i>	469 .. 1070hPa	
<b>Pollution degree</b>		2	
IEC 60664-1, IEC 62477-1			
<b>Vibration sinusoidal</b> IEC 60068-2-6		2g / 10 .. 500Hz, 1 hour/direction X,Y,Z	non-operating, mounted on DIN-Rail
<b>Shock test sinusoidal halfwave</b> IEC 60068-2-27		30g / 11ms ±5ms, 3 bumps/direction, 9 bumps total	non-operating, mounted on DIN-Rail
<b>Audible noise</b>		Some audible noise may be heard during no load, overload or short circuit.	

## Overvoltage categories

Underlying IEC standard	61010-1	62368-1 <sup>1)</sup>	60950-1	61558-2-16 <sup>2)</sup>	62477-1	61204-7	60664-1
Mains transient voltage	II	II	II	III	III	III	III
Creepage & Clearance	III	II	III	II	III	III	III

<sup>1)</sup> Edition 2

<sup>2)</sup> not applicable along with IEC 61204-7

 For altitudes above 3000mASL (9842ftASL) the next lower OVC must be considered.

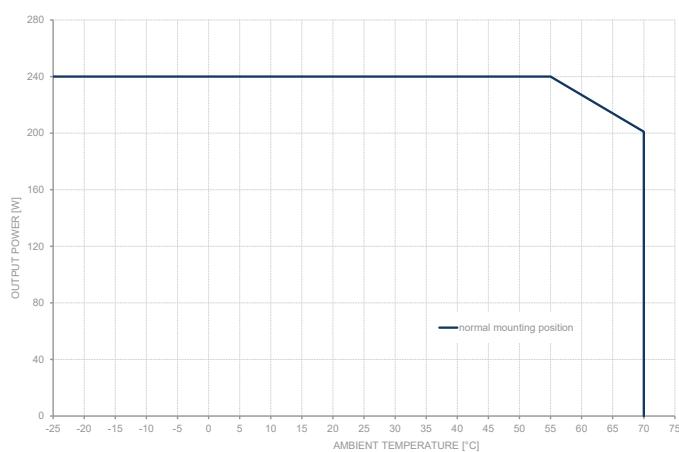

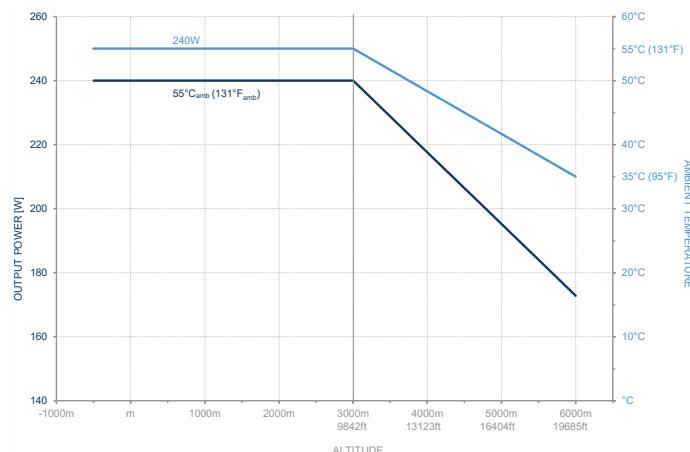

Fig. 13: Output power or ambient temperature derating at increasing altitudes

Fig. 14: Output power derating in dependence of the ambient temperature

## 6. Reliability and Service lifetime

<b>Service lifetime</b>	<i>min.</i>	53 000 / 58 000hrs	400 / 500V <sub>AC</sub> , 100% P <sub>out</sub> , 40°C <sub>amb</sub> , 24h operating
	<i>min.</i>	94 000 / 90 000hrs	400 / 500V <sub>AC</sub> , 75% P <sub>out</sub> , 40°C <sub>amb</sub> , 24h operating
	<i>min.</i>	149 000 / 164 000hrs	400 / 500V <sub>AC</sub> , 100% P <sub>out</sub> , 25°C <sub>amb</sub> , 24h operating
<b>Early life MTBF</b> Telcordia SR-332 Issue 4	<i>min.</i>	1.1M / 1.0M / 0.8M hrs	P <sub>out_nom</sub> , 25 / 40 / 55°C <sub>amb</sub>
<b>Service life MTBF</b> Telcordia SR-332 Issue 4	<i>min.</i>	5.7M / 4.0M / 2.3M hrs	P <sub>out_nom</sub> , 25 / 40 / 55°C <sub>amb</sub>

**i** The maximum service lifetime guaranteed by the eCap manufacturer is 131 400hrs (15 years). All values above are theoretically calculated.

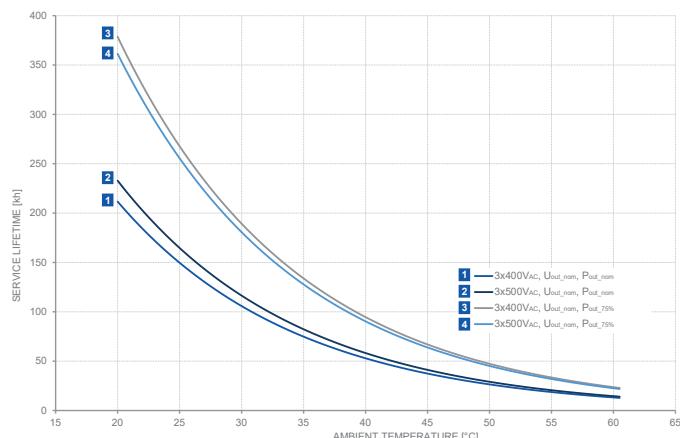

Fig. 15: Power supply service lifetime in dependence of ambient temperature

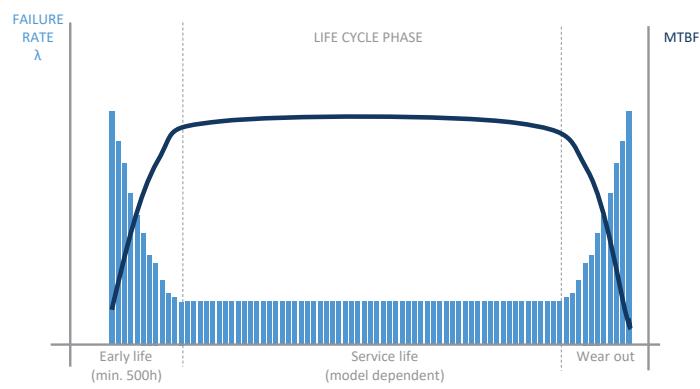

Fig. 16: Generic diagram visualising failure rate and MTBF values during the products life-cycle

## 7. Dimensions & Mechanical data

<b>Enclosure material</b>	Aluminum	
<b>Cover material</b>	Aluminum	
<b>Inflammability class</b>	V0	Enclosure, cover and terminals
UL 94		
<b>Width</b>	55.0mm (2 <sup>11</sup> / <sub>64</sub> in)	
<b>Height</b>	129.0mm (5 <sup>5</sup> / <sub>64</sub> in)	
<b>Depth</b>		w/o DIN-Rail
Screw terminal model (-A0)	135.7mm (5 <sup>11</sup> / <sub>32</sub> in)	
Push-in terminal model (-A1)	138.2mm (5 <sup>7</sup> / <sub>16</sub> in)	
<b>Weight</b>	780g (1.72lb)	
<b>Lever arm</b>	max. 62mm (2 <sup>7</sup> / <sub>16</sub> in)	into the direction of Y axis
<b>Torsional moment on DIN-Rail</b>	max. 0.47Nm (4.16lb in)	into the direction of Z axis
<b>Enclosure openings</b>	max. 7mm (9/ <sub>32</sub> in)	
<b>DIN-Rail types</b>	TH 35-7.5, TH 35-15	
IEC 60715		

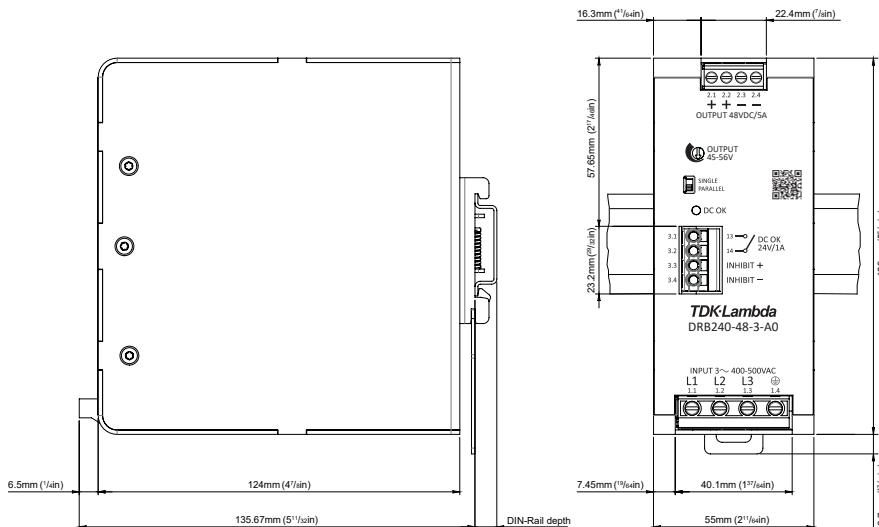

Fig. 17: Dimension drawing of DRB240-48-3-A0

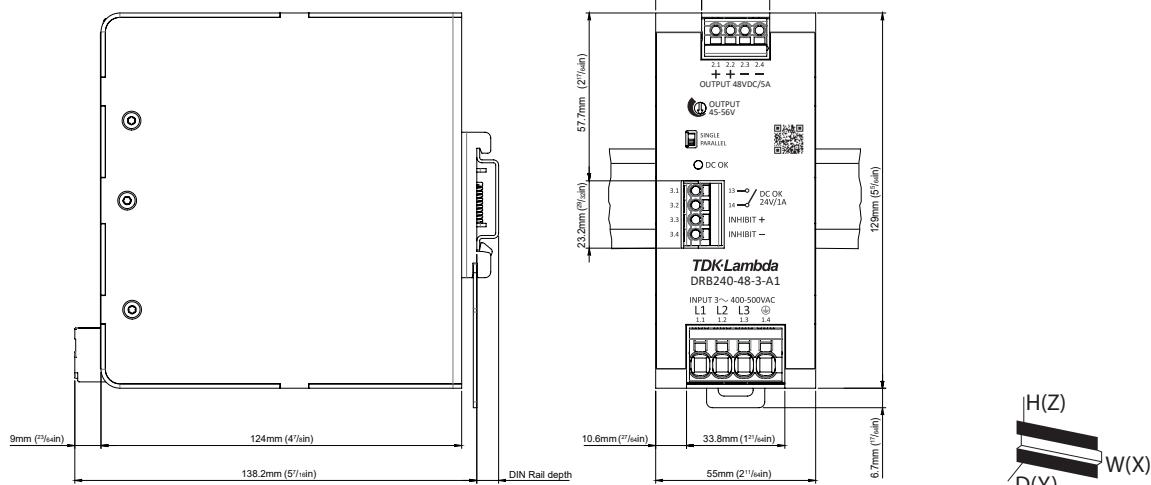

Fig. 18: Dimension drawing of DRB240-48-3-A1

Unless otherwise stated, all values are specified in normal mounting position, at full load, nominal input and output voltages, 25°C (77°F) ambient temperature and a run-in time of 5 minutes.

## 8. Installation clearances

### Vertically (Z axis)

Top side	<b>1</b>	min. 40mm (1 <sup>37</sup> / <sub>64</sub> in)	installation above heat sources not permitted
Bottom side	<b>2</b>	min. 30mm (1 <sup>3</sup> / <sub>16</sub> in)	

### Horizontally (X axis)

Left side	<b>3</b>	min. 15mm (1 <sup>19</sup> / <sub>32</sub> in)	to active components (heat sources)
Right side	<b>4</b>	min. 15mm (1 <sup>19</sup> / <sub>32</sub> in)	

Left side	<b>3</b>	min. 5mm (1 <sup>13</sup> / <sub>64</sub> in)
Right side	<b>4</b>	min. 5mm (1 <sup>13</sup> / <sub>64</sub> in)

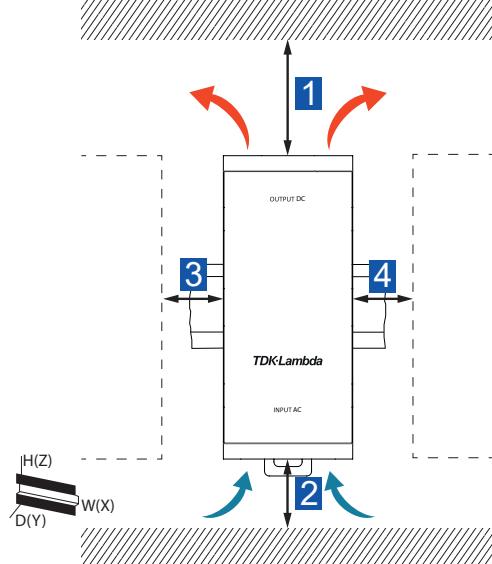

Fig. 19: Installation clearances in normal mounting position

## 9. Wiring & Connection

### DRB240-48-3-A0

Terminal type	Input	Output	Signaling
Recommended screw driver	Slotted screw SL 0.8x4.0mm (SL 1/32 x 1/8in)	Slotted screw SL 0.6x3.5mm (SL 1/32 x 9/64in)	Push-in SL 0.5x3.0mm (SL 1/64 x 1/8in)
Solid wire	0.5-4.0mm <sup>2</sup> (16-10AWG)	0.5-2.5mm <sup>2</sup> (24-12AWG)	0.2-2.5mm <sup>2</sup> (26-12AWG)
Flexible wire	0.5-4.0mm <sup>2</sup> (16-10AWG)	0.5-2.5mm <sup>2</sup> (24-12AWG)	0.2-2.5mm <sup>2</sup> (26-12AWG)
Standard ferrules	0.25-2.5mm <sup>2</sup>	0.25-1.5mm <sup>2</sup>	0.2-1.5mm <sup>2</sup>
Uninsulated ferrules	0.25-2.5mm <sup>2</sup>	0.25-1.5mm <sup>2</sup>	0.2-2.5mm <sup>2</sup>
Stripping length	6-7mm (15/64 - 9/32in)	7-8mm (9/32 - 5/16in)	9-10mm (23/64 - 25/64in)
Tightening torque	0.5-0.8Nm (4.4-7.0lb in)	0.5Nm (4.4lb in)	-

### DRB240-48-3-A1

Terminal type	Input	Output	Signaling
Recommended screw driver	Push-in SL 0.6x3.5mm (SL 1/32 x 9/64in)	Push-in SL 0.5x3.0mm (SL 1/64 x 1/8in)	Push-in SL 0.5x3.0mm (SL 1/64 x 1/8in)
Solid wire	0.2-10.0mm <sup>2</sup> (24-8AWG)	0.2-2.5mm <sup>2</sup> (26-12AWG)	0.2-2.5mm <sup>2</sup> (26-12AWG)
Flexible wire	0.2-6.0mm <sup>2</sup> (24-8AWG)	0.2-2.5mm <sup>2</sup> (26-12AWG)	0.2-2.5mm <sup>2</sup> (26-12AWG)
Standard ferrules	0.25-4.0mm <sup>2</sup>	0.2-1.5mm <sup>2</sup>	0.2-1.5mm <sup>2</sup>
Uninsulated ferrules	0.25-6.0mm <sup>2</sup>	0.2-2.5mm <sup>2</sup>	0.2-2.5mm <sup>2</sup>
Stripping length	15mm (19/32in)	9-10mm (23/64 - 25/64in)	9-10mm (23/64 - 25/64in)

**i** In compliance to IEC/EN/UL 62368-1 (Ed.2) ferrules are required if flexible wires are used. In compliance with IEC/EN/UL 61010-1, 61010-2-201 appropriate copper wires must be used that withstand operating temperatures of at least 75°C (167°F) in ambients NOT exceeding 40°C (104°F), and 90°C (194°F) in ambients exceeding 40°C (104°F).

## 10. Signaling & Control

### DC OK

Type	Relay contact	
Characteristic	N/O	
Closing	$U_{out} > 95\% U_{set}$	
Opening	$U_{out} < 90\% U_{set}$	
Resistive load	max.	1A
Trigger hysteresis	typ.	1.2V

duration min. 100ms  
duration min. 100ms  
24V<sub>DC</sub>

### Remote ON/OFF

Type	Electrical contact	
Characteristic	Inhibit	
ON threshold	typ.	6V
OFF threshold	typ.	4V
Restart delay	max.	5s
Open circuit voltage	max.	30V
Current	max.	10mA
Reference potential	DC-	
Parallel connection	yes	
Active discharging	no	

OFF mode  
ON mode

OFF mode

Input <sup>2)</sup>	4kV	Criterion A	5kHz
Output	2kV	Criterion A	5kHz
Signal contact <sup>2)</sup>	2kV	Criterion A	5kHz
<b>Surge voltages</b> IEC/EN 61000-4-5			
Input symmetrical (L-L) <sup>2)</sup>	2kV	Criterion A	2Ω+18μF, for Φ = 0°, 90°, 180°, 270°
Input asymmetrical (L-PE) <sup>2)</sup>	4kV	Criterion A	12Ω+9μF, for Φ = 0°, 90°, 180°, 270°
Output symmetrical (L-L)	0.5kV	Criterion A	2Ω+18μF
Output asymmetrical (L-PE)	1kV	Criterion A	12Ω+9μF
<b>Conducted disturbances Input, signal line, PE<sup>3)</sup></b> IEC/EN 61000-4-6	10V	Criterion A	150kHz..80MHz
<b>Power frequency magnetic field</b> IEC/EN 61000-4-8	30A/m	Criterion A	50Hz, 60s each axis (x, y, z)
<b>Voltage dips/sags and interruptions</b> IEC/EN 61000-4-11, 61000-4-34	500ms 200ms 20ms 5000ms	Criterion A Criterion A Criterion A Criterion C	400VAC at 70%, 50Hz 400VAC at 40%, 50Hz 400VAC at 0%, 50Hz 400VAC at 0%, 50Hz

<sup>1)</sup> Except for the ITU broadcast frequency bands 87..107MHz, 174..230MHz and 470..790MHz, where the level shall be 3V/m.

<sup>2)</sup> Exceeds the requirements of the European Low Voltage Directive 2014/35/EU

<sup>3)</sup> Except for the ITU broadcast frequency bands 47..68MHz, where the level shall be 3V.

### i Performance level definitions:

#### Criterion A:

The device continues operation as intended during and after the test. The specified performance level accepts a change of ±10% on nominal output voltage and current. There is neither a violation of the performance level, nor a loss of function if the device is used as intended.

#### Criterion B:

The device continues operation as intended after the test. The specified performance level accepts a change of ±10% on nominal output voltage and current. There is neither a violation of the performance level, nor a loss of function if the device is used as intended. During the test a violation of the performance level is allowed.

#### Criterion C:

A temporary loss of function is allowed, provided the function is auto-recoverable, or can be restored by the operation of the controls.

## 15. Electromagnetic emission

Investigated under generic standards IEC/EN 61000-6-3 (2007) + A1 (2011) / AC (2012) - Emission standard for residential, commercial and light-industrial environments.

<b>Conducted noise emission Input</b> EN 55011, CISPR 11	Class B	150kHz..30MHz
<b>Radiated noise emission Input</b> EN 55011, CISPR 11	Class B	30MHz..1GHz
<b>Harmonic currents Input</b> IEC/EN 61000-3-2	Class A	0kHz..2kHz
<b>Voltage changes, voltage fluctuations and flicker Input</b> IEC/EN 61000-3-3	PASS	50Hz

Unless otherwise stated, all values are specified in normal mounting position, at full load, nominal input and output voltages, 25°C (77°F) ambient temperature and a run-in time of 5 minutes.

## 16. Certifications

UL 61010-1 CAN/CSA-C22.2 No. 61010-1	Safety requirements for electrical equipment for measurement, control, and laboratory use - Part 1: General requirements
UL 61010-2-201 CAN/CSA-C22.2 No. 61010-2-201	Safety requirements for electrical equipment for measurement, control, and laboratory use - Part 2-201: Particular requirements for control equipment UL-File: E356563
IEC EN 61010-1	Safety requirements for electrical equipment for measurement, control, and laboratory use - Part 1: General requirements
IEC EN 61010-2-201	Safety requirements for electrical equipment for measurement, control, and laboratory use - Part 2-201: Particular requirements for control equipment
IEC EN 62368-1 (Ed.2)	Audio/video, information and communication technology equipment - Part 1: Safety requirements
UL 62368-1 (Ed. 2)	Audio/video, information and communication technology equipment - Part 1: Safety requirements UL-File: E511889

## 17. Additional safety standards

The safety design of the product complies additionally with the following harmonised standards.

IEC 60950-1	Information technology equipment - Safety - Part 1: General requirements
IEC/EN 62477-1	Safety requirements for power electronic converter systems and equipment - Part 1: General
IEC/EN 61204-7	Low-voltage switch mode power supplies - Part 7: Safety requirements
IEC/EN 61558-2-16	Safety of transformers, reactors, power supply units and similar products for supply voltages up to 1100 V - Part 2-16: Particular requirements and tests for switch mode power supply units and transformers for switch mode power supply units
EN 60204-1	Safety of machinery - Electrical equipment of machines - Part 1: General requirements

## 18. Compliance & Registration

Conformity with health, safety, and environmental protection standards for products sold within the European Economic Area (EEA).

UKCA (UK Conformity Assessed) is the product marking that is used for certain goods being placed on the United Kingdom market.

Registration mark to indicate products conformity to the technical regulations of the Eurasian Customs Union (Russia, Belarus, Armenia, Kazakhstan and Kyrgyzstan).

The Waste Electrical and Electronic Equipment Directive (WEEE Directive) is the European Community Directive 2012/19/EU on collection, recycling and recovery targets for all types of electrical goods.

The Restriction of Hazardous Substances Directive 2011/65/EU (RoHS 2) regulates the use of certain hazardous substances in electrical and electronic equipment.

Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) is a European Union regulation that addresses the production and use of chemical substances, and their potential impacts on both human health and the environment.

Unless otherwise stated, all values are specified in normal mounting position, at full load, nominal input and output voltages, 25°C (77°F) ambient temperature and a run-in time of 5 minutes.

## 19. Typical use-cases

### 19.1 Parallel Operation

For the purpose of power increase, power supplies can be paralleled. Furthermore, a paralleling can be done for limited redundancy purposes in order to backup malfunctions occurring on the primary (AC) side of the power supplies. The following measures must be taken into account:

- ▶ Only power supplies of the same series and power rating must be paralleled
- ▶ The dip switch on the front side of the power supplies must be switched to PARALLEL
- ▶ Load wiring shall be identical in terms of length and cross section
- ▶ The output voltage of the power supplies shall be adjusted to the same value ( $\pm 200\text{mV}$ )
- ▶ All paralleled power supplies must be operated under the same ambient conditions
- ▶ The power supplies must not be operated under any condition which requires a power derating (e.g. altitudes above 3000mASL (9842ftASL), temperatures above  $55^\circ\text{C}_{\text{amb}}$  ( $131^\circ\text{F}_{\text{amb}}$ ), etc.)
- ▶ If more than three power supplies are paralleled, each output must be protected by a decoupling module (e.g. DRM series), MCB, diode, or fuse
- ▶ The increased installation clearances must be considered (see "Installation clearances" on page 12)

 In parallel operations the values of output load regulation, inrush currents, EMI, harmonic and leakage currents will increase.

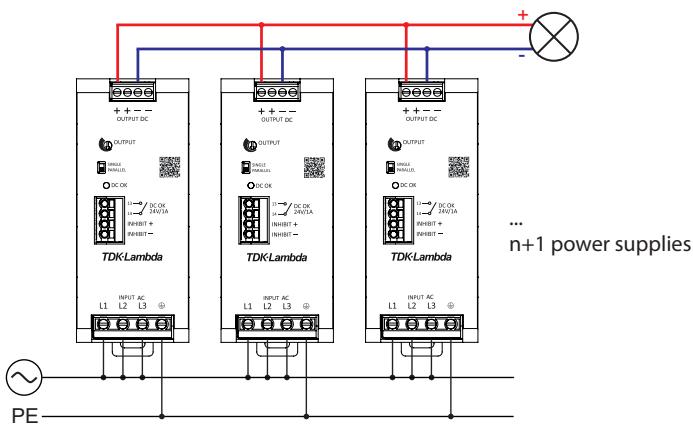

Fig. 25: Connection scheme for paralleling  $n+1$  power supplies

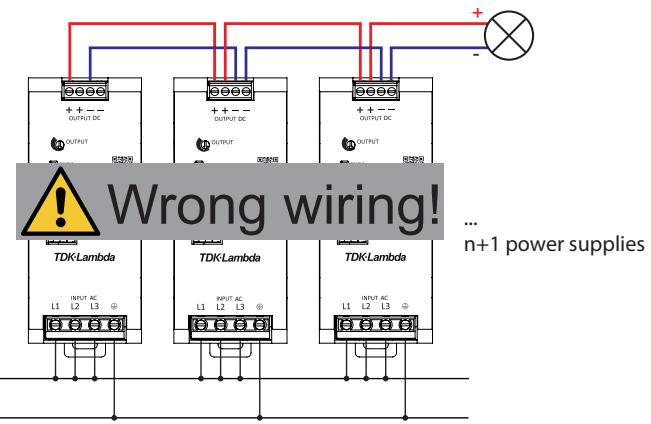

Fig. 26: Example scheme of wrong parallel wiring

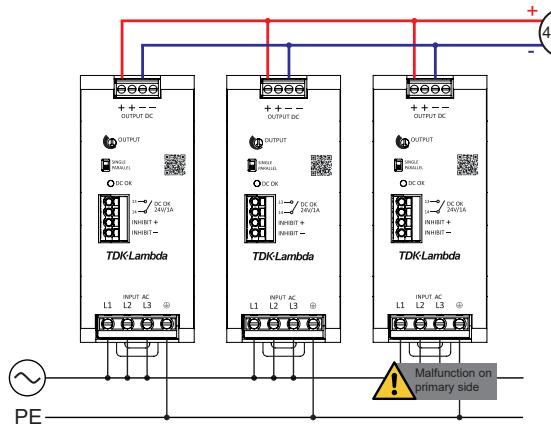

Fig. 27: Example of a 480W application with limited redundancy

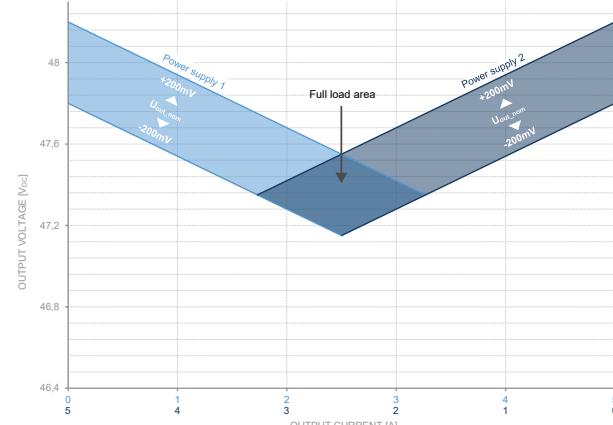

Fig. 28: Schematic of load sharing in PARALLEL mode if PSUs are adjusted to  $U_{\text{out,nom}} \pm 200\text{mV}$

## 19.2 Series operation

For the purpose of higher load voltages, power supplies can be connected in series. The following measures must be taken into account:

- The output voltage sum must not exceed 250V<sub>DC</sub>
- If the output voltage sum exceeds 60V<sub>DC</sub>, a safeguard against unintended touching must be considered
- Only power supplies of the same series and power rating must be connected in series
- The dip switch on the front side of the power supplies must be switched to SINGLE
- All power supplies in series must be operated under the same ambient conditions
- The power supplies must not be operated under any condition which requires a power derating (e.g. altitudes above 3000mASL (9842ftASL), temperatures above 55°C<sub>amb</sub> (131°F<sub>amb</sub>), etc.)
- The increased installation clearances must be considered (see "Installation clearances" on page 12)

**i** In series operations the values of output load regulation, inrush currents, EMI, harmonic and leakage currents will increase.

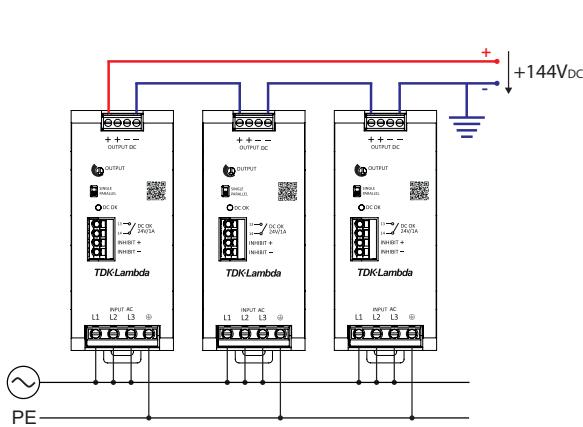

Fig. 29: Connection scheme for series operation with positive voltage level

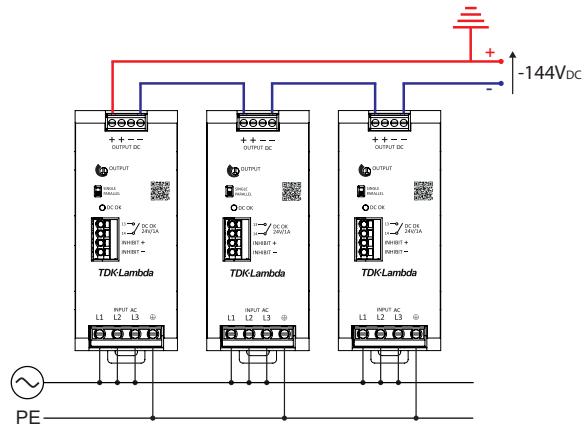

Fig. 30: Connection scheme for series operation with negative voltage level

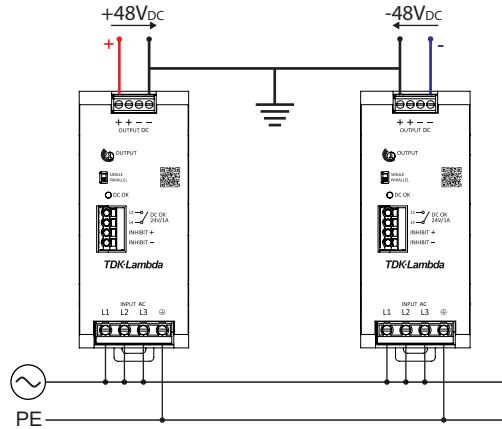

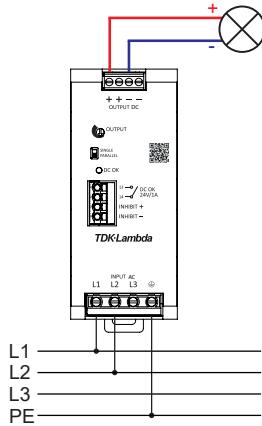

Fig. 31: Connection scheme for series operation with centre tap

### 19.3 Two-phase operation

The device is capable to run continuously on two phases of a 3-phase power grid. A power derating is not required if all parameters stay within the technical product specification. In particular, all conditions associated with a power derating must be carefully considered.

Please note if running on two phases:

- ▶ Power losses will increase and can no longer be guaranteed as specified for 3-phase operation
- ▶ Hold-up times as specified for 3-phase operation can no longer be guaranteed
- ▶ The device will go into OTP mode if operating permanently at input voltages below 350V<sub>AC</sub>
- ▶ The device is no more compliant with IEC/EN 61000-3-2 harmonic current limits
- ▶ Safety approvals under UL 61010-1, -2-201 and UL 62368-1 (Ed.2) are no more applicable

**Fig. 32:** Connection diagram for 2-phase operation
