### 5. Safety Precautions

Head the following precautions to prevent injury or accidents.

- Do not use these sensors under any circumstance in which the range of their ratings, environment conditions or other specifications are exceeded. Using the sensors in any way which causes their specifications to be exceeded may generate abnormally high levels of heat, emit smoke, etc., resulting in damage to the circuitry and possibly causing an accident.
- 2) Our company is committed to making products of the highest quality and reliability. Nevertheless, all electrical components are subject to natural deterioration, and durability of a product will depend on the operating environment and conditions of use. Continued use after such deterioration could lead to overheating, smoke or fire. Always use the product in conjunction with proper fire-prevention, safety and maintenance measures to avoid accidents, reduction in product life expectancy or break-down.
- Before connecting, check the pin layout by referring to the connector wiring diagram, specifications diagram, etc., to verify that the connector is connected properly. Mistakes made in connection may cause unforeseen problems in operation, generate abnormally high levels of heat, emit smoke, etc., resulting in damage to the circuitry.
- 4) Do not use any motion sensor which has been disassembled or remodeled.
- 5) Failure modes of sensors include short-circuiting, open-circuiting and temperature rises. If this sensor is to be used in equipment where safety is a prime consideration, examine the possible effects of these failures on the equipment concerned, and ensure safety by providing protection circuits or protection devices. Example :
  - ·Safety equipments and devices
  - Traffic signals
  - ·Burglar and disaster prevention

6.Operating	Precautions					
6-1 Basic F	Principles					
PaPIRs is a pyroelectric infrared sensor that detects variations in infrared rays. However, it may not detect in the following cases: lack of movement, no temperature change in the heat source. Besides, it could also detect the presence of heat sources other than a human body. Efficiency and reliability of the system may vary depending on actual operating conditions:						
1) Detect	ing heat sources other than the h	uman body, s	such as:			
b) Whe beam c) Sudd	I animals entering the detection a n a heat source for example sun hit the sensor regardless inside en temperature change inside or HVAC, or vapor from the humidifi	light, incande or outside the around the d	detection area.			
2) Difficul	Ity in sensing the heat source					
a cor b) Non-	<ul> <li>a) Glass, acrylic or similar materials standing between the target and the sensor may not allow a correct transmission of infrared rays,</li> <li>b) Non-movement or quick movements of the heat source inside the detection area. (Please refer to 4-1 for details about movement speed.)</li> </ul>					
3) Expan	sion of the detection area					
	of considerable difference in the on area may be wider apart from t			y temperature,		
4) Malfun	ction / Detection error					
output o	essary detection signal might be o due to the nature of pyro-electric n strictly, please implement the o	element. Whe	en the application does not a	ccept such		
6-2 Optima	al Operating Environment Conditi	ons				
2) Humid 3) Pressu	erature : Please refer to the ma ity Degree :15~85% Rh (Avoid ure : 86~106kPa	l condensatio	n or freezing of this product)			
<ul><li>4) Overheating, oscillations, shocks can cause the sensor to malfunction.</li><li>5) This sensor is not waterproof or dustproof. Avoid use in environments subject to excessive</li></ul>						
moisture, condensation, frost, containing salt air or dust. 6) Avoid use in environments with corrosive gases.

### **8.Special Notice**

This document is only for reference, so in the case of actual consideration and adoption, please order the latest specification sheet.

As improvements are continually being made, the specifications or design of this product are subject to change without notice.

Please strictly follow the "Safety Precautions" and "Operating Precautions" on the specifications sheet. Normal functioning cannot be expected if used in environments or conditions other than those specified above.

We are deeply committed to providing the highest quality control for this product. Nevertheless:

- For issues not addressed above, we invite you to share your suggestions, or details about your company's usage conditions, installation, specifications, needs of end users, and applications for this sensor.
- 2) To reduce the risk of harm caused by product failure to human life or assets, this product should always be used in conjunction with other safety measures, such as protective circuitry, double layered circuit boards, etc., and used within the guaranteed performance, efficiency or special characteristics values stated in the specification sheet.
- 3) This product is warranted for a period of one year, from date of delivery, applicable only if the product is used in accordance with the precautions mentioned above and the specifications sheet. We will replace or repair at the delivery location any malfunctioning or defective part or entire product if such defect or malfunction is caused by us.

However, the above warranty shall be void in the following circumstances:

- a) Damage caused to something else than the product itself.
- b) Damage or loss resulting during transportation, storage or handling after the date of supply.
- c) Phenomenon unforeseeable in the state of the technology as of the supply date.
- d) Damage caused by natural or unnatural events such as fire, earthquake, flood, or conflicts beyond our control.
