Metal Film (Thin Film) Chip Resistors, High Reliability Type 0402, 0603, 0805, 1206

Type: ERA 2A, 3A, 6A, 8A

Features

• High reliabilityStable at high temperature and humidity

(85 °C 85 %RH rated load, Category temperature range: -55 to +155 °C)

• High accuracy-----Small resistance tolerance and Temperature Coefficient of Resistance

• High performance.....Low current noise, excellent linearity

• Reference Standard IEC 60115-8, JIS C 5201-8, EIAJ RC-2133B

RoHS compliant

■ Packaging Methods, Land Pattern, Soldering Conditions and Safety Precautions Please see Data Files

■ Explanation of Part Numbers

• E24 Series

Consist of three figures for E24 series resistance value. The first two digits are significant figures of resistance and the third one denotes number of zeros following. (example) 102 : 1 $k\Omega$

• E96 Series and other Resistance values

note: Duplicated resistance values as E24 series part numbers shall follow E24 part numbers. (apply three digit resistance value)

				ERA8ARW	±0.05					

⁽¹⁾ Rated Continuous Working Voltage (RCWV) shall be determined from RCWV=√Rated Power × Resistance Values, or Limiting Element Voltage listed above, whichever less.

Power Derating Curve

For resistors operated in ambient temperatures above 85 °C, power rating shall be derated in accordance with the figure on the right.

⁽²⁾ Overload (Short-time Overload) Test Voltage (SOTV) shall be determined from SOTV=2.5 × Power Rating or max. Overload Voltage listed above whichever less.

⁽³⁾ E192 series resistance values are also available. Please contact us for details.

⁽⁴⁾ Duplicated resistance values between E96, E192 and E24 series shall follow E24 Part Numbers. (apply three digit resistance value)
