## Delay On Make (Operate) <br> ERDM Econo-Timer <br> Time Delay Relay

## Description

Econo-Timers are a combination of digital electronics and a reliable electromechanical relay. These devices offer a DPDT relay output for relay logic circuits, and isolation of input to output voltages. Cost effective for OEM applications such as random starting, sequencing ON, switch de-bouncing, anti-short cycling, and other common delay on make applications.

## Operation

Upon application of input voltage, the time delay begins. The output is de-energized before and during the time delay. At the end of the time delay, the output is energized and remains energized until input voltage is removed.
Reset: Removing input voltage resets the time delay and output.

## Ordering Table

| ERDM | X | X |
| :---: | :---: | :---: |
| Series | Input | Adjustment |
|  | -1-12V DC | -1 - Factory Fixed |
|  | -2-24VAC | -2 - Knob on Unit |
|  | -3-24V DC | -3-External Adjust |
|  | -4-120 V AC |  |
|  | -5-120 V DC |  |
|  | -6-230 V AC |  |
