Low Signal Relay

Surface Mount DPDT Relay

- High dielectric withstand voltage of 2,000 VAC between coil and contacts (standard type); 1,500 VAC between contacts of different polarity.
- Meets FCC Part 68 and Telcordia 2.5 kV surge withstand.
- Standard models conform to UL/CSA standards. BSI (EN60950) certified models available (-Y versions)
- Low power consumption of 140 mW (Non-latching)
- Available in through-hole and SMT terminals.
- Tape and reel or tube packaging.
- RoHS Compliant.

Ordering Information

Standard Version

	Model	Non-la	itching		Dual coil latching		
Terminal	Contact form	Standard	European Version*	Single coil latching			
Gull-wing	DPDT	G6S-2F	G6S-2F-Y	G6SU-2F	G6SK-2F		
Inside "L"		G6S-2G	G6S-2G-Y	G6SU-2G	G6SK-2G		
PCB through-hole		G6S-2	G6S-2-Y	G6SU-2	G6SK-2		

* BSI certified for EN60950

Notes: 1. When ordering, add the rated coil voltage to the model number. Example: G6S-2F <u>DC12</u>

6

----- Rated coil voltage

2. When ordering tape packing (surface mount models), add "-TR" to the model number. Example: G6S-2F-TR DC12

Tape packing

"-TR" is not part of the relay model number. Therefore, it is not marked on the relay case.

 Dual coil latching models are available with a High-sensitivity coil. (140 mW; 200 mW for DC24) When ordering High-sensitivity dual coil latching models, add "-H" to the model number. Example: G6SK-2G-H-TR DC5

High-sensitivity coil

Model Number Legend

|--|

- 1. Relay Function
 - None: Non-latching

5. Packaging

None: Tube packaging TR: Tape and reel packaging (Surface mount models)

6. Rated Coil Voltage 3, 4.5, 5, 12, 24 VDC

Specification

Contact Data

Load	Resistive load (cos f = 1)
Rated load	0.5 A at 125 VAC 2 A at 30 VDC
Contact type	Bifurcated crossbar
Contact material	Ag (Au-Alloy)
Max. carry current	2 A
Max. operating voltage	250 VAC, 220 VDC
Max. operating current	2 A
Max. switching capacity	62.5 VA, 60 W
Min. permissible load	10 µA, 10 mVDC

Note: P level: $\lambda_{60} = 0.1 \times 10^{-6}$ /operation

This value was measured at a switching frequency of 120 operations/min and the criterion of contact resistance is 50 Ω . This value may vary depending on the operating environment. Always double-check relay suitability under actual operating conditions.

Coil Data

G6S - Standard Non-latching (G6S-2F, G6S-2G, G6S-2)

Rated voltage	Rated current	Coil resistance	Pick-up voltage	Dropout voltage	Maximum voltage	Power consumption (mW)			
(VDC)	(mA)	(Ω)		% of rated volt

24	12.5	1,920	1.98 1.23		1.34	2.23			140% max. @ 23°C	Approx. 300		

G6S - European Version (EN60950 certified), Non-latching (G6S-2F-Y, G6S-2G-Y, G6S-2-Y)

Rated voltage	Rated current	current resistance		Dropout voltage	Power consumption (mW)	
(VDČ)	(mA)	(Ω)		% of rated volt	age	
5	40.0	125	75% max.	10% min.	170% max.@ 23°C	Approx. 200
12	16.7	720	1			
24	9.6	2,504				Approx. 230

Note: 1. The rated current and coil resistance are measured at a coil temperature of 23° C with a tolerance of $\pm 10\%$.

2. The operating characteristics are measured at a coil temperature of 23°C.

3. Pick-up voltage will vary with temperature.

4. The maximum voltage is the highest voltage that can be imposed on the relay coil.

■ Characteristics

ote 1)	75 mΩ max.							
te 2)	4 ms max. (mean value approx. 2.5 ms G6S; 2.0 ms G6SU, G6SK)							
note 2)	4 ms max. (mean value approx. 1.5 ms G6S; 2.0 ms G6SU, G6SK)							
	Approx. 0.5 ms							
width	10 ms (latching models)							
	Mechanical: 36,000 operations/hr Electrical: 1,800 ops/hr (under rated AC load). 1,200 ops/hr (under rated DC load)							
note 3)	1,000 MΩ min. (at 500 VDC)							
	2,000 VAC, 50/60 Hz for 1 minute (G6S, G6SU, G6S "-Y") between coil and contacts 1,000 VAC, 50/60 Hz for 1 minute (G6SK) between coil and contacts 1,500 VAC, 50/60 Hz for 1 minute between contacts of different and same polarity 500 VAC, 50/60 Hz for 1 minute between set and reset coils (G6SK)							
Conforming to Telcordia specs.	2,500 V (2 x 10 μ S) between coil and contacts for G6S, G6SU and G6S "-Y" 2,500 V (2 x 10 μ S) between contacts of different poles							
Conforming to	1,500 V (10 x 160 μ S) between coil and contacts							
FCC Part 68	1,500 V (10 x 160 $\mu S)$ between contacts of different and same polarity							
Mechanical durability	10 to 55 Hz; 5 mm double amplitude							
Malfunction durability	10 to 55 Hz; 3.3 mm double amplitude							
Mechanical durability	1,000 m/s ² ; approx. 100 G							
Malfunction durability	750 m/s²; approx. 75 G							
	-40 to +85°C with no icing or condensation -40 to +70°C with no icing or condensation (G6SK and G6S "-Y" with DC24 coil)							
	5% to 85% RH							
Mechanical	100,000,000 operations min. (at 36,000 operations/hour)							
Electrical	100,000 operations min. (2A@30VDC, resistive; 1,200 ops/hr.) 100,000 operations min. (0.5A@125VAC, resistive; 1,800 ops/hr.) See "Characteristic Data"							
	Approx. 2g							
	te 2) note 2) width note 3) Conforming to Telcordia specs. Conforming to FCC Part 68 Mechanical durability Malfunction durability Malfunction durability Malfunction durability Malfunction durability							

Note: 1. The contact resistance was measured with 10 mA at 1 VDC with a voltage drop method.

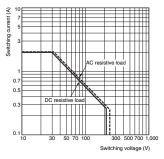

2. Values in parentheses are typical values unless otherwise stated.

3. The insulation resistance was measured with a 500-VDC megohmmeter applied to the same parts as those used for checking the dielectric strength (except between the set and reset coil).

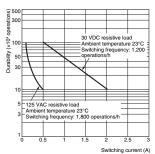

4. Data shown are of initial value.

Packaging

Tube packing	Standard nomenclature	50 pcs per anti-static tube						
Tape packing (Surface mount versions)	When ordering, add "TR" before the rated coil voltage (e.g., G6S-2F-TR-DC12)							
	Note: TR is not part of the relay model number and will not be marked on the relay.							

■ Tape and Reel Dimensions (Surface Mount Models)

• Relays per reel: 400

• Reels per packing carton: 2 (800 relays)

■ Approvals

UL Recognized (File No. E41515) / CSA Certified (File No. LR31928) - - Ambient Temp. = 40°C

Contact form	Coil rating	Contact ratings	Number of test operations
DPDT (2c)		3 A at 30 VDC (Resistive)	6,000
		0.3 A at 110 VDC (Resistive)	
		0.5 A at 125 VAC (General Use)	

BSI (EN60950) (File No.8064)

Contact form	Isolation Category	Voltage					
DPDT	Supplementary Isolation	250 VAC					

Note: 1. The rated values approved by each of the safety standards (e.g., UL, CSA and BSI) may be different from the performance characteristics individually defined in this catalog.

2. In the interest of product improvement, specifications are subject to change.

Precautions

- Use a DC power supply with 5% or less ripple factor to operate the coil.
- Do not use the G6S where subject to strong external magnetic fields.
- Do not use the G6S where subject to magnetic particles or excessive amounts of dust.
- Do not reverse the polarity of the coil (+, -).

Correct use

Long-term Continuously ON Contacts

Using the Relay in a circuit where the Relay will be ON continuously for long periods (without switching) can lead to unstable contacts because the heat generated by the coil itself will affect the insulation, causing a film to develop on the contact surfaces. We recommend using a latching relay (magnetic-holding relay) in this kind of circuit. If a single-side stable model must be used in this kind of circuit, we recommend using a fail-safe circuit design that provides protection against contact failure or coil burnout.

Relay Handling

Use the Relay as soon as possible after opening the moisture-proof package. If the Relay is left for a long time after opening the moisture-proof package, the appearance may suffer and seal failure may occur after the solder mounting process. To store the Relay after opening the moisture-proof package, place it into the original package and sealed the package with adhesive tape.

When washing the product after soldering the Relay to a PCB, use a water-based solvent or alcohol-based solvent, and keep the solvent temperature to less than 40°C. Do not put the Relay in a cold cleaning bath immediately after soldering.

Claw Securing Force During Automatic Mounting

During automatic insertion of Relays, be sure to set the securing force of each claw to the following so that the Relay's characteristics will be maintained.

Dimension A: 1.96 N max. Dimension B: 4.90 N max. Dimension C: 1.96 N max.

- Latching types are delivered in the reset position. We recommend that a reset voltage be applied in advance to start operation.
- Do not drop the G6S or otherwise subject it to excessive shock.
- Remove the relay from the packing immediately prior to usage.
- Be sure to read the precautions and information common to all relays, contained in the Technical User's Guide, "Electromechanical Relays, Technical Information" for correct use.

G6S (K) (-U) -2 Soldering

- Soldering temperature: Approx. 250°C (At 260°C if the DWS method is used.)
- Soldering time: Approx. 5 s max. (Approx. 2 s for the first time and approx. 3 s for the second time if the DWS method is used.)
- Be sure to adjust the level of the molten solder so that the solder will not overflow onto the PCB.

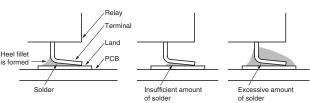

G6S (K) (-U) -2F Soldering

The thickness of cream solder to be applied should be within a range between $150 \ \mu m$ and $200 \ \mu m$ on Omron's recommended PCB pattern.

In order to perform correct soldering, it is recommended that the correct soldering conditions be maintained as shown below on the left side.

Correct Soldering

Incorrect Soldering

Visually check that the relay is properly soldered.
