Hubbell INFINESTATION™ Audio/Video Modules

15-Pin and 9-Pin

Hubbell's expanded line of 15-pin VGA-style connectors are supplied in various INFINESTATION™ module styles to accommodate the industry's growing needs for expansion. Hubbell's 9-pin high-density D-sub modules allow easy access to RS232 control and serial devices. Applications include video distribution, desktop and laptop computers, monitors, cameras and projectors, home theater and entertainment.

Audio/Video Modules

Hubbell's wide offering of INFINESTATION™ loaded and unloaded modules is the most extensive Audio/Video solution in the structured cabling industry. Whatever the specification, application or preference, Hubbell's INFINESTATION™ modules answers the call. Applications include Audio/video distribution devices, desktop and laptop computers, cameras and projectors, home theater and entertainment systems. All modules are 1 unit except IMCRS15 series (1.5 unit).

IMF INFINESTATION Frames

The IMF series accepts INFINESTATION modules in 3 unit combinations for single-gang and 6 unit combinations for two-gang applications. Start by selecting a frame and then the required mix of modules.

The applications below are supported by this standard. The 569B standard incorporates all previous addenda to the 569A

569B: Surface (Perimeter) Raceway Systems

- May contain work area outlets at desired locations.
- Include the base channel, cover, fittings and outlet accessories.
- May be either single channel or multi-channel with dividers.
- Are designed to maintain 25mm (1 in.) minimum cable bend radius.
- Can be installed as baseboard, chair rail, or ceiling runs with vertical feeders.
- Support single or multiple room distribution.
- Should be sized at 40% max cable fill to accommodate future expansion.

NOTE: Metallic raceway systems shall be properly bonded to ground per J-STD-607-A. Never combine power and data cabling within a single raceway channel.

Non-Metallic Raceway

Metal Raceway

569B: Furniture Pathways and Spaces

- Separation requirements apply for power and data cabling.
- Furniture pathways shall have a minimum cross section area of 9.5 cm² (1.5 in²).
- This specification is based on a work area cluster serving four persons with three outlet connections each.

NOTE: The usable cross sectional area may be reduced by bend radius limits of the installed cables.

569B: Access Floor Pathways and Spaces

- Standard access floors shall have a minimum of 150mm (6in.) finished floor height.
- A floor height of 200mm (8in.) is the recommended clearance for cable trays.
- The free space above any cable tray or raceway under an access floor must allow for easy removal of covers.
- Connecting hardware is prohibited below the access floor, however a consolidation point is permitted as an exception.
- Locate penetration points and floor outlets away from office traffic.
- All standards apply for separation of power and data cables.

Connexion

569B: Poke-Thru Fittings

- A poke-thru device is used for penetration of building cabling through above-grade structural floors. Typically available in flush or raised configurations.
- Maintain fire rating of the floor after installation.
- Provide power and/or data service ports in limited capacity.

NOTE: Contact a Structural Engineer before penetrating load-bearing floors

Standard UTP Wiring Conventions

Horizontal UTP Cable and Patch Cords

- Solid copper 4-pair 24 AWG UTP is specified for distribution cabling. Stranded UTP is specified for patch cords for flexibility. Shielded cable is not commonly used in the U.S. Splices bridge taps are not permitted.
- Cable, connectors and patch cords shall be marked with the performance category.
- Always match performance categories of cables and components throughout the infrastructure.
- All cable, cords and connecting hardware shall meet performance requirements of ANSI/TIA/EIA-568-B.1 and 568-B.2. Hubbell assures this compliance with all products and cable partners.

COLOR CODING:

	white-blue/blue
	white-orange/orange
	white-green/green
	white-brown/brown

Recognized Connector and Wiring Configurations

- 8-position modular jack/plug.
- 8-position modular panel/plug.
- T568A wiring or T568B wiring options.
- Cat 5e or Cat 6 recommended.

NOTE: Be sure that the patch cord wiring matches the cable infrastructure configuration.

RJ 45 - TIA/EIA-568 Conventions

Two wiring standards were adopted. Both configurations are based on maximum transmission performance.

8 Position / 8 Wire

T568A

- Preferred method
- Directly compatible with 2-pair voice and Token Ring systems utilizing 6-position connectors

8 Position / 8 Wire

T568B

- Optional method
- AT&T's standard
- Directly compatible with AT&T phone systems

LAN Wiring Conventions

Local Area Network standards designed to operate over UTP specify pin/pair assignments on modular connectors for various signal transmission protocols. While TIA/EIA-568A and 568B conventions support all these designations, there are some cases where the user chooses to cable only the number of pairs required to support these applications.

8 Position / 4 Wire

10/100BASE-T

- 10 Mbps Ethernet over UTP
- Uses only two pairs
- 100 Mbps Ethernet

8 Position / 4 Wire

Token Ring

- 4/16 Mbps Token Ring over copper
- Uses only two pairs

8 Position / 4 Wire

TP-PMD

- 100 Mbps FDDI over copper (pending)
- Uses only two pairs

8 Position / 8 Wire

1000BASE-T (T568A)

- 1000 Mbps Ethernet over UTP
- Uses all four pairs

Recommended UTP Installation Practices

- Use the proper strip tool for the cable jacket. Don't cut into the conductor pairs.
- Position the stripped cable jacket as close as possible to the termination point to minimize exposure of the twisted pairs.
- Maintain the natural twist of all conductor pairs as close as possible to the termination point. For Category 5e and 6 wiring, the maximum length of un-twisted pairs is 0.5". Minimum un-twisting optimizes Return Loss performance.
- Never un-coil UTP cable from a stationary spool. Permanent kinks will result from straightening, and NEXT failures may occur. Unwind the cable by rotating the spool with steady speed and tension. Also avoid scraping and kinking when feeding into conduit or raceway.
- Allow 12" of cable slack behind wall outlets for future re-termination.
- Use proper supports and spacing to minimize sag in horizontal runs. Long runs should use raceways or cable trays. Do not overload cable supports and trays.
- Avoid EMI by maximizing the separation distance from high voltage circuits, transformers, motors, etc. For shared pathways, use partitioned raceway with physical separation between power wiring and UTP.
- Do not run UTP cables over heater ducts or hot water ducts. High temperatures will degrade performance and deteriorate the cable jacket.
- Centralize TR's to equalize the horizontal cable runs on each floor. Maximum horizontal distance is 90 meters. Very short horizontal runs can increase NEXT.
- Never use staples to position cables.
- Use good cable management practices to maintain proper bend radius.
- Place long-run service loops in a large "figure-eight" pattern to minimize induced noise.
- For Category 5e and 6 cabling, store service loops in a figure "8" pattern to minimize cross-talk and EMI noise pick-up.
- Maintain proper bend radius inside all outlet boxes.
- For best results, use the zip cord and peel away the cable jacket.
- All grounding and bonding shall be according to J-STD-607-A.

Do's		Don'ts	
	Maintain a maximum bend radius of 4x the cable diameter (4-pair cables)		Never exceed a 90 degree bend
	Apply cable ties loosely and at random intervals		Don't over-tighten cable ties
	Try to minimize the amount of jacket twisting		Don't over-twist cable, it can lead to torn jackets
	Avoid stretching the cable		Don't exceed 25 lbs. of pulling tension
