FEATURES/BENEFITS

- Industry standard package
- Designed for external heat-sink attachment
- Over-sized thyristor ratings
- Direct-copper bonding technology

DESCRIPTION

These solid-state single inline package (SIP) relays are designed for mounting on printed circuit boards. The Series LS relays facilitate heat sinking by providing an interface surface. The relays are designed with 16A, 25A and 50A thyristors. They can switch loads with high starting currents. The nominal switched currents depend on the size of the heat sink and are limited by the cross section of the tracks of the printed circuit (mainly 25A/30A). The relays use a direct-bonded copper substrate for thermal efficiency, thermal stress performance and long-life expectancy.

APPLICATIONS

- Motor control — Pumps, reversing, integration of relays in terminal boxes
- Lamp control — Infrared drying, traffic lights, theater lighting

MOUNTING EXAMPLES

Heat sinks references:

FW100: L=100mm about 4°C/W (1SSR) without ventilation (3.6°C/W with 4SSRs)

FW150: L=150mm about 3°C/W (1SSR) without ventilation (2.6°C/W with 6SSRs)

Figure 7b — Clips with screws on standard heat sinks; dimensions in inches (mm)

In each case, allow 0.16 in. (4mm) between the printed circuit board and the heat sink to keep a correct insulation between input to output (0.16 in./4mm insulated washer). To maintain a good contact between the SSR and the heat sink, use thermal grease.
