

Time delay relays

FUJI time delay relays feature top performance and dependability. These compact industrial time delay relays are specifically designed for process control, machine tools, safety device control, and other applications in which space is at a premium and reliability essential.

FUJI manufactures a wide variety of highly versatile time delay relays, which include Super Timers and digital timers that meet diverse needs in industry.

KKD05-126

■ Super Timers

● MS4S/Multimode and compact body

The MS4S is a timer with four operation modes. The on-delay, flicker, one-shot or signal off-delay operation modes can be selected.

See page 03/52 for further information.

KKD05-145

● ST7P/Miniature size

The ST7P is a highly efficient miniaturized on-delay timer.

The maximum timing interval is 12 hours.

See page 03/60 for further information.

Time Delay Relays

Super Timers

MS4S

Direct-reading time-scale and compact body MS4S Super Timer

MS4S series Super Timers feature an easy setting and direct-reading system of four time-scale.

MS4SM timer is multimode operation type and MS4SA and MS4SC timers are on-delay operation type.

■ Features

- Time-scale indication window and time-scale selector
By turning a time-scale selector, the timing-scales appear in the indication windows one set a time. Although this is a multimode timer, the optional times such as 56 or 27 minutes can be easily set with the direct-reading time-scale.
- Compact timer with instantaneous contact
On-delay timers with instantaneous contact, as well as multimode and on-delay timers, are compact. The front to back length of the timers is only 66.5mm.
- Operation mode indication window and operation mode selector
Four operation modes are provided (MS4SM type only). By turning the operation mode selector, the on-delay, flicker, one-shot, or signal off-delay operation mode can be selected. The present mode is shown in the operation mode indication window with the marks PO, FL, OS or SF.

- LED power ON and output indicator
The power-source lamp (Green) is lit when power is on and flickers during timer operation. The output lamp (Red) is lit when the timed NO contact is on.
- Wide range of AC supply voltage
Supply voltages of 100 to 240V AC are commonly available (ordering code: AP type only).
- Instantaneous operation function with 0 indication
When the timer dial is set at 0, output is given instantaneously, allowing sequence checks to be performed easily.
- Time unit indication window and time unit selector
By turning the time selector, time units of 0.1 sec., sec., min, and hours. can be selected and made to appear in the indication window.
- Improvement of resistance to waveform distortion
The resistance to distortion of secondary voltage waveform of the power supply caused by inverters and uninterruptible power supplies (UPS) is improved.

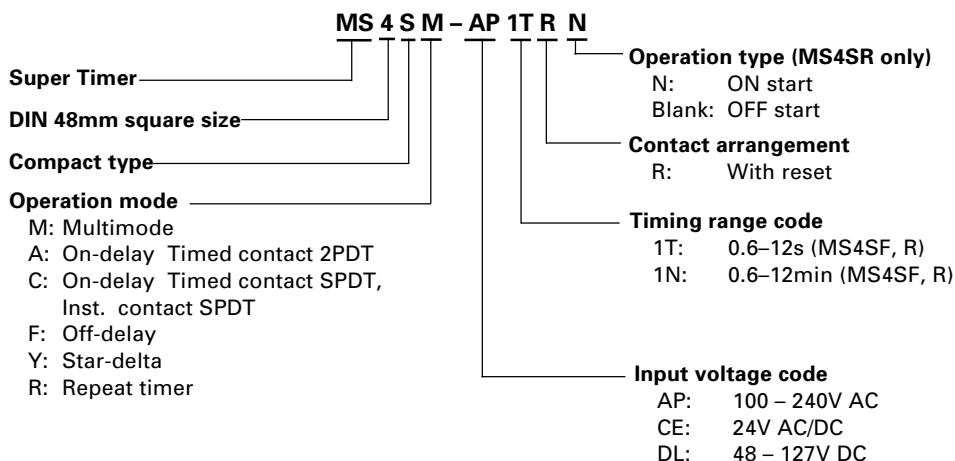

- UL, and TÜV approved

■ Timing range/16 ranges

Time-scale	Time unit indication window			
	0.1s	sec	min	hrs

R50006667 (MS4SA, MS4SC)

Time Delay Relays

Super Timers

MS4S

■ Timing and wiring diagrams

MS4SM

1. On-delay **PO**

- Turn the mode selector until **PO** is displayed.
- When power is on, applying the start signal turns the timed NO (Normally open) contact on after the set time has elapsed.
- For the power-on start, the start signal pins (2 and 6) must be connected in advance.

2. Flicker **FL**

- Turn the mode selector until **FL** is displayed.
- When power is on, applying the start signal turns the timed contact on and off repeatedly at the set time intervals.

3. One-shot **OS**

- Turn the mode selector until **OS** is displayed.
- When power is on, applying the start signal instantly turns the timed NO contact on and turns it off after the set time has elapsed.

4. Signal off-delay **SF**

- Turn the mode selector until **SF** is displayed.
- When power is on, applying the start signal instantly turns the timed NO contact on. Removing the start signal turns the contact off after the set time has elapsed.

MS4SA

● On-delay

- When power is applied, the timed NO contacts make after the set time has elapsed.
- When power is removed, the contacts reset.

MS4SC

● On-delay

- Timed contact
When power is applied, the NO contact makes after the set time has elapsed. When power is removed, the contacts reset.
- Instantaneous contact
When power is applied, the NO contact makes instantly. When power is removed, the contacts reset.

Notes: • T=Set time. T-a=Time period within the set time
• The gate signal is used to interrupt the elapsing of timing operation.

Time Delay Relays

Super Timers

ST7P, 7B

Miniature size Super Timer ST7P series

The ST7P and ST7B series are compact and highly accurate Super Timers.

The ST7P and ST7B are on-delay operation types.

■ Features

- These Super Timers are highly accurate. Their repeat accuracy is less than $\pm 1\%$ at maximum setting time.

- Timing range
ST7P and ST7B are the single timing range types; 0.06 sec. to 24 hours.
- The large setting dial makes time setting easy.
- The LED indicators make it easy to check timer operation.
- The ST7P has been approved by the UL,  us and TÜV.
