

S15C Bimodal Discrete to IO-Link Device Converter

Datasheet

- Compact bimodal to IO-Link device converter that connects discrete inputs and sends the value to the IO-Link Master
- Enables additional logic functions such as delays, totalizer, count, EPM, duration, and mirroring
- Outputs a discrete value as received from IO-Link Master Process Data Out
- Discrete input/output can be independently configured as NPN or PNP
- Rugged over-molded design meets IP65, IP67, and IP68
- Connects directly to a sensor or anywhere in-line for ease of use
- S15C IO-Link converters are a quick, easy, and economical way to integrate non-IO-Link devices into an IO-Link system
