### FEATURES

**Depth of 18.6 mm saves space.**  
This space-saving switch has body dimensions of 25 (W) x 14.8 (D) x 18.6 (H). (63% that of our previous T-15 series switch.)

### PRECAUTIONS WHEN USING CADMIUM-FREE CONTACT TYPE

Models with cadmium-free contacts have been introduced in order to reduce environmentally harmful substances. ("F" is affixed to the end of the part number.) We ask customers who are currently using products with cadmium-containing contacts (no "F" at the end of the part number) to please make the switch to models with cadmium-free contacts. When switching, operating life may differ depending on the load. Please be sure to verify this by conducting an evaluation using actual equipment.

### DATA (life curve)

Tested sample: T-06 series

Tested condition: 125 V AC, 250 V AC, Power factor: 0.6 and 10 cpm

### FEATURES

**1. Capable of high capacity switching (10 A 250 V AC and 15 A 125 V AC)**

Ag alloy contacts are used to prevent temperature rises and allow high capacity switching.

**2. Terminals constructed for easy implementation**

A unique terminal construction facilitates soldering.

(B: black; R: red; Z: gray; Y: yellow; G: green.)  
2. EP rubber cap is available in black only.  
3. Letters on the display panel are aluminum colored and the area surrounding the letters is black.  
4. Indication plate and rubber cap are compatible with the T-15 series switch, T-10 series switch, and T-03/T-06 series switches (when plate thickness is 2.7 mm or less).

### • Using the different rubber caps

We recommend silicon rubber and EP rubber caps for the following applications.

#### 1) Silicon rubber caps

- When it is necessary to differentiate by color.
- When using in applications that require resistance to heat and cold. Ambient temperature:  $-25^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  (EP rubber type is  $0^{\circ}\text{C}$  to  $+40^{\circ}\text{C}$ .)
- When compactness is required.

#### 2) EP rubber type

When cost is the primary consideration.

## 15A HIGH SNAP SWITCHES TOGGLE, ROCKER AND PUSH-BUTTON TYPES

## T-15 SERIES SWITCHES

### FEATURES

#### 1. Series now includes rocker and push-button switches.

Based on the well-established T-15 Series switch, the mechanism is kept as is and a rocker type and push-button type have been added to the series. (Note that the push-button type is rated at 10 A.)

#### 2. Sealed type added for use in different environments.

Packing is used where parts join and an O-ring is used to seal moving parts. New to the series, this type can be used in harsh environments such as those with water, oil, dust, and gas.

- Panel-sealed type

Entry of water, oil, dust and gas from the front of the panel is prevented.

(Panel front: IP67\*; Inside of panel: IP40)

- Terminal-sealed type

Both switch body and terminals have been sealed to protect from dust and gas that enters from the panel.

(panel front: IP67\*; inside of panel: IP60)

- Wire lead type

Furthermore, a cover is provided for the terminals to keep out water and oil that enters from the panel.

(panel front: IP67\*; inside of panel: IP67)

Remark: The asterisk in "Panel front: IP67\*" means this only applies to toggle and push-button types.

The panel surface for the rocker type is IP64. Please see NOTES 1 and 2 regarding use of the sealed type.

#### 3. Rubber cap also available in silicon type for excellent weather resistance.

- 5 colors available so you can distinguish switches by purpose.

<Example>

Black: For main power supply

Gray: For setting and switching

Red: For resetting

- With a usable ambient temperature range of -25°C to +85°C, use is possible in environments that require resistance against heat and cold.

**NOTES**

**1. Dustproof, waterproof, anticorrosive gas, and oil-proof designs**

The panel-sealed type/terminal-sealed type/wire lead type switch has a protection level of IP67 on the outer side of the mounting panel and a level of IP40, IP60, or IP67 on the inner side of the panel.

For actual application, note the following points:

- 1) Avoid immersion in water or oil during installation.
- 2) Avoid immersion in water or oil during operation.
- 3) Oils or gases impose varying degrees of impact on the switch's sealing performance depending on type or quantity.
- 4) While the switch has a immersion and dust-protected design, its sealing performance or operability may be adversely affected in an environment where in the switch's movable parts can be contaminated with dust, oil, or other foreign objects. For the toggle type, use of a rubber cap is recommended.
- 5) The standard toggle switch, when used with a rubber cap, provides a protection level of IP54.

It should be used in an environment where it will not be subject to frequent water splashes.

6) As the sealing performance of the rocker type switch is affected by the panel processing accuracy or mounted panel thickness, check the switch under actual loading conditions. (While water or dust will not enter the switch's internal structure, it may enter the panel.)

7) Do not operate the rocker type switch when water accumulates in the actuator.

**2. Installation**

- 1) For the toggle and push-button type
  - a. When installing the standard type switch, be sure to use a hex nut.
  - b. For the panel-sealed, terminal-sealed and wire lead types, use a lock washer on the front side of the panel, and an O-ring on the back side of it.
  - c. Do not install the switch by rotating it.
- 2) For the rocker type
  - a. In case the panel-sealed, terminal-sealed or wire leads types are used in the condition where the water splash on, please install the switches tilt more than 25°. (90° recommended)

- b. In case water inside the switch case may freeze, please install the switch vertically to avoid the water remain inside the switch.

**3) Rubber cap installation**

- a. The washer should be used on the back side of the panel.

- b. Enough screw pitch should be obtained being adjusted within 3 to 3.5mm (See figure above).
- c. Install a rubber cap on the switch knob before securing the switch with the hex nut.
- d. The mounting hole in the panel should preferably be provided with an anti-rotation projection.

- e. If the rubber cap is installed over the hex nut, the waterproof performance will be impaired although the dustproof performance will not be affected.

**3. Soldering**

- 1) By using 350°C soldering iron, soldering should be completed within 5 seconds.
- 2) Exercise care so as not to touch the switch body with a soldering iron.

**4. Load type and ratings**

- 1) When the switch is loaded with a lamp, motor or capacitive load, a surge current higher than the stationary current passes through the switch contacts. Measure the surge with the actual load and, if needed, take necessary action so that the surge will not exceed the switch's rated current.
- 2) When the switch is loaded with an inductive load (relay, solenoid, buzzer, etc.), a contact failure may result from arc discharge caused by a counterelectromotive force. It is advisable that you use an adequate anti-spark circuit across the switch contacts.

**5. Others**

- 1) Do not apply an excessive static load exceeding 112.7N {11.5kgf} perpendicular to the direction of operation.
- 2) Operate the switch knob by hand.
- 3) Take care not to drop the product as it may impair performance.
